HSPT Exam Simulator

Full-Length Practice Exam 11

Complete printable test with 298 multiple-choice questions, answer key, and detailed explanations.

Section	Questions	Time
Verbal Skills	60	20 minutes
Quantitative Skills	52	35 minutes
Reading Comprehension	62	35 minutes
Mathematics	64	45 minutes
Language	60	30 minutes

General Directions

Work through each section within the recommended time. Choose the best answer for every question. Mark one answer (A-D) for each item. Use the answer key and explanations only after completing the test.

Recommended total testing time: 165 minutes. Calculators should be used only when permitted by the rules followed for your HSPT preparation.

Section 1: Verbal Skills

60 questions | Recommended time: 20 minutes

1. Which word is closest in meaning to concur?

A) hesitate
B) predict
C) agree
D) complain

2. Which word is closest in meaning to frugal?

A) fearful
B) economical
C) polished
D) fortunate

3. Which word is closest in meaning to sporadic?

A) irregular
B) widespread
C) continuous
D) deliberate

4. Which word is most nearly opposite in meaning to literal, as in a literal interpretation?

A) accurate
B) written
C) detailed
D) figurative

5. Which word is most nearly opposite in meaning to cumbersome?

A) bulky
B) manageable
C) awkward
D) complicated

6. Which word is most nearly opposite in meaning to deferential?

A) defiant
B) courteous
C) respectful
D) obedient

7. Encore is to performance as postscript is to ____.

A) envelope
B) salutation
C) letter
D) address

8. Forecast is to future as recollection is to ____.

A) past

B) possibility

C) plan

D) warning

9. Veto is to proposal as cancellation is to ____.

A) refund

B) postponement

C) notification

D) reservation

10. Which word belongs with hinge, swivel, and pivot as a feature that permits rotation?

A) rivet

B) axle

C) clamp

D) brace

11. Three choices describe communication without spoken words. Which choice does not belong?

A) gesture

B) nod

C) mutter

D) wink

12. An auction, a barter, and a purchase all belong to which broad category?

A) transactions

B) financial institutions

C) ownership documents

D) price reductions

13. An envelope is in exactly one of three drawers: top, middle, or bottom. The labels read:
Top: "The envelope is not in this drawer."
Middle: "The envelope is in the top drawer."
Bottom: "The envelope is not in the middle drawer."
Exactly one label is true. Where is the envelope?

A) the top drawer

B) the middle drawer

C) the bottom drawer

D) Its location cannot be determined.

14. Ada, Bo, Cy, and Di sit around a circular table. Ada sits opposite Cy. Bo sits immediately clockwise from Ada. Who sits immediately clockwise from Cy?

A) Ada

B) Bo

C) Di

D) It cannot be determined.

15. A costume shop claims, "Every garment labeled WOOL is washed by hand." Which observation would show that the claim is false?

A) An unlabeled garment is washed by hand.

B) A garment labeled WOOL is washed by hand.

C) An unlabeled garment is washed in a machine.

D) A garment labeled WOOL is washed in a machine.

16. Which word is closest in meaning to tangible?

A) touchable

B) imaginary

C) suitable

D) memorable

17. Which word is closest in meaning to replenish?

A) inspect

B) refill

C) polish

D) distribute

18. Which word is closest in meaning to cursory?

A) thorough

B) superficial

C) habitual

D) skeptical

19. Which word is most nearly opposite in meaning to gregarious?

A) sociable

B) talkative

C) welcoming

D) solitary

20. Which word is most nearly opposite in meaning to expendable?

A) replaceable

B) disposable

C) optional

D) essential

21. Which word is most nearly opposite in meaning to stagnant, as in stagnant water?

A) shallow

B) muddy

C) flowing

D) chilly

22. Oasis is to desert as clearing is to ____.

A) forest

B) meadow

C) path

D) shore

23. Inscription is to stone as embroidery is to ____.

A) needle

B) stitch

C) pattern

D) cloth

24. Duplicate is to original as echo is to ____.

A) silence

B) sound

C) cavern

D) distance

25. Which word belongs with refund, rebate, and reimbursement as a return of money?

A) quotation

B) surcharge

C) repayment

D) invoice

26. Which group consists entirely of verbs meaning to join separate things?

A) splice, sever, fuse

B) scatter, merge, split

C) splice, merge, fuse

D) divide, detach, combine

27. Which material belongs to both groups: materials used to make containers, and materials that can melt into a liquid when heated?

A) paper

B) cotton

C) glass

D) wood

28. Every object labeled FRAGILE requires cushioning. All of a studio's clay models have blue tags. Which additional rule would guarantee that every clay model requires cushioning?

A) Every object with a blue tag is labeled FRAGILE.

B) Every object labeled FRAGILE has a blue tag.

C) Some objects with blue tags are labeled FRAGILE.

D) Every cushioned object has a blue tag.

29. A repair procedure requires soldering before sealing and sealing before testing. Which additional requirement would make the procedure impossible to complete in order?

A) Cleaning must occur before soldering.

B) Testing must occur before soldering.

C) Labeling must occur after testing.

D) Soldering must occur before labeling.

30. Hana and Ivo stand directly facing each other. A cabinet is beside Hana on her left. As Ivo looks toward Hana, on which side of Ivo is the cabinet?

A) his left

B) directly behind him

C) directly in front of him

D) his right

31. Which word is closest in meaning to jubilant?

A) overjoyed

B) weary

C) uncertain

D) resentful

32. Which word is closest in meaning to aloof?

A) helpful

B) detached

C) enthusiastic

D) jealous

33. Which word is closest in meaning to conjecture, as in a conjecture about what happened?

A) proof

B) record

C) guess

D) command

34. Which word is most nearly opposite in meaning to innate?

A) inborn

B) natural

C) acquired

D) inherent

35. Which word is most nearly opposite in meaning to humble, as in a humble attitude toward one's achievements?

A) modest

B) arrogant

C) thankful

D) quiet

36. Which word is most nearly opposite in meaning to vindicate?

A) justify

B) defend

C) pardon

D) incriminate

37. Census is to population as inventory is to ____.

A) profit

B) wage

C) price

D) stock

38. Boast is to pride as apology is to ____.

A) remorse

B) curiosity

C) certainty

D) amusement

39. Tenant is to landlord as borrower is to ____.

A) lender

B) purchaser

C) debtor

D) seller

40. Three choices name parts of a book. Which choice names a kind of book instead?

A) almanac

B) glossary

C) appendix

D) index

41. Three choices name things used to control the flow of a liquid. Which choice instead names a device that measures a condition?

A) valve

B) dam

C) faucet

D) gauge

42. Which word can name both a financial institution and the land immediately beside a river?

A) branch

B) reserve

C) current

D) bank

43. Jem, Kea, and Luz each choose a different ink: cyan, magenta, or yellow. Jem does not choose yellow, and Kea does not choose cyan. Which additional fact is sufficient to show that Luz chooses yellow?

A) Jem chooses cyan.

B) Luz does not choose cyan.

C) Kea chooses magenta.

D) Luz does not choose magenta.

44. Three switches, R, S, and T, each point either up or down. R and S must point the same way. S and T must point opposite ways. If R points up, what must be true?

A) T points up.

B) T may point either way.

C) T points down.

D) The rules cannot be satisfied.

45. Doorways connect rooms F–G, G–H, H–J, and F–J. The G–H doorway is blocked. No other doorways exist. Which route can someone follow from G to H?

A) G, J, H

B) G, F, J, H

C) G, F, H

D) G, H

46. Which word is closest in meaning to lucid?

A) hostile

B) cloudy

C) clear

D) elaborate

47. Which word is closest in meaning to adroit?

A) clumsy

B) rigid

C) skillful

D) hesitant

48. Which word is closest in meaning to camaraderie?

A) fellowship

B) rivalry

C) isolation

D) obedience

49. Which word is most nearly opposite in meaning to tenacious, as in tenacious in pursuing a goal?

A) determined

B) wavering

C) persistent

D) patient

50. Which word is most nearly opposite in meaning to mundane?

A) routine

B) familiar

C) extraordinary

D) ordinary

51. Which word is most nearly opposite in meaning to equivocal, as in an equivocal reply?

A) evasive

B) uncertain

C) definite

D) ambiguous

52. Ancestor is to descendant as predecessor is to ____.

A) successor

B) colleague

C) assistant

D) neighbor

53. In word sounds, alliteration is to beginnings as rhyme is to ____.

A) meanings

B) endings

C) spellings

D) definitions

54. Anagram is to rearrangement as summary is to ____.

A) repetition

B) decoration

C) interruption

D) condensation

55. Which choice belongs with satin, denim, and velvet?

A) granite

B) plaster

C) bronze

D) linen

56. Three choices describe reducing something to smaller pieces. Which choice instead describes joining layers?

A) crush

B) grind

C) pulverize

D) laminate

57. In standard American English, which pair contains two words that stress the first syllable as nouns but the second syllable as verbs?

A) present; object

B) hammer; table

C) garden; answer

D) whistle; promise

58. The claim "Both beacons are transmitting" is false. Each beacon either is transmitting or is not. Which statement must be true?

A) Neither beacon is transmitting.

B) At least one beacon is not transmitting.

C) Exactly one beacon is not transmitting.

D) Both beacons are transmitting.

59. During one update, all tags are replaced simultaneously: GOLD becomes SILVER, SILVER becomes BRONZE, and BRONZE stays BRONZE. Each original tag is processed once. What does GOLD, SILVER, BRONZE become?

A) BRONZE, BRONZE, BRONZE

B) SILVER, SILVER, BRONZE

C) GOLD, BRONZE, BRONZE

D) SILVER, BRONZE, BRONZE

60. Neri accepts a film, rowing, or skating. Paz accepts rowing, chess, or skating. Rowing is fully booked; the other activities are available. Which available activity do both accept?

A) a film

B) skating

C) chess

D) rowing

Section 2: Quantitative Skills

52 questions | Recommended time: 35 minutes

61. What number comes next?
4, 7, 11, 18, 29, 47, ____

A) 65

B) 76

C) 72

D) 94

62. Each new term equals the previous term plus the sum of its digits. What number comes next?
17, 25, 32, 37, 47, 58, ____

A) 71

B) 63

C) 69

D) 116

63. A sequence starts with 9. Each later term is the units digit of 7 times the preceding term. The first terms are 9, 3, 1, 7, 9, 3. What is the 30th term?

A) 1

B) 7

C) 9

D) 3

64. What number comes next?
4, 9, 9, 14, 14, 14, 19, 19, 19, 19, ____

A) 19

B) 20

C) 24

D) 29

65. A two-digit number has a tens digit of 6. Reversing its digits produces a number 27 less than the original. What is the original number?

A) 63

B) 36

C) 66

D) 69

66. Which value of n makes 18 × 25 × n a perfect square?

A) 3

B) 2

C) 5

D) 7

67. Define a □ b to mean a + b + ab. What is 3 □ (1 □ 2)?

A) 23

B) 11

C) 17

D) 29

68. For a positive integer n, consider all integers from 1 through 2n, inclusive.
Quantity A: the number of odd integers in this list.
Quantity B: n + 1.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

69. The numbers p and q are distinct negative integers.
Quantity A: |p + q|.
Quantity B: |p| + |q|.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

70. Two distinct positive integers both round to 40 to the nearest ten.
Quantity A: the larger integer minus the smaller integer.
Quantity B: 5.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

71. A diagonal divides a convex quadrilateral into two triangles.
Quantity A: the sum of the quadrilateral's interior angles.
Quantity B: the sum of all six interior angles of the two triangles.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

72. Two different vertices of a square are selected.
Quantity A: the distance between the selected vertices.
Quantity B: the square's side length.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

73. Eight congruent small cubes fit together without gaps to form one larger cube, arranged two along each edge.
Quantity A: the larger cube's edge length divided by a small cube's edge length.
Quantity B: the larger cube's surface area divided by a small cube's surface area.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

74. Each term after the first is the number of letters in the standard English spelling of the preceding term. What number comes next?
15, 7, 5, 4, ____

A) 3

B) 5

C) 4

D) 6

75. The terms list the largest prime factors of 10, 11, 12, 13, 14, and so on. What term comes next?
5, 11, 3, 13, 7, 5, ____

A) 2

B) 4

C) 8

D) 17

76. The nth term is the whole-number quotient of 30 ÷ n, with any remainder ignored. The first terms are 30, 15, 10, 7, 6, 5. At what position does 3 first appear?

A) 7

B) 9

C) 10

D) 8

77. Which fraction equals the repeating decimal 0.272727... ?

A) 27/100

B) 3/11

C) 27/10

D) 2/7

78. Which fraction has a terminating decimal representation?

A) 7/40

B) 7/12

C) 7/18

D) 7/21

79. Two positive integers have greatest common factor 6 and least common multiple 90. One of the integers is 18. What is the other?

A) 15

B) 36

C) 30

D) 54

80. The product (n − 5)(n + 2) equals 0. What is the sum of all possible values of n?

A) −7

B) 3

C) 7

D) −10

81. The numbers x and y are positive.
Quantity A: x% of y.
Quantity B: y% of x.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

82. A list contains nonzero real numbers whose product is negative.
Quantity A: the number of positive entries.
Quantity B: the number of negative entries.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

83. Quantity A: the percent increase from 30 to 45.
Quantity B: the percent decrease from 45 to 30.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

84. Two congruent triangles are joined along one whole side to form a quadrilateral, without overlapping.
Quantity A: the quadrilateral's perimeter.
Quantity B: the sum of the original triangles' perimeters.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

85. Triangles P and Q each have a base of 6 units and a perimeter of 20 units. Neither is assumed to be isosceles.
Quantity A: the area of P.
Quantity B: the area of Q.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

86. Two perpendicular diameters divide a circle into four regions. Consider one region.
Quantity A: the fraction of the circle's total area in that region.
Quantity B: the fraction of the circle's circumference along that region's curved edge.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

87. A sequence is written in blocks. The first block is 1. Each new block begins one higher than the preceding block and counts down to 1. The sequence begins 1, 2, 1, 3, 2, 1, 4, 3, 2, 1. What is the 12th term?

A) 1

B) 3

C) 4

D) 5

88. Each term follows this rule: if the previous term is even, divide it by 2; if it is odd, multiply it by 3 and add 1. What comes next?
7, 22, 11, 34, 17, 52, ____

A) 26

B) 25

C) 53

D) 157

89. All positive integers that are multiples of 4 or 9 are listed in increasing order, without repetition. What comes next?
4, 8, 9, 12, 16, 18, 20, 24, ____

A) 25

B) 26

C) 28

D) 27

90. What number comes next?
2, 4, 7, 12, 19, 30, ____

A) 41

B) 43

C) 42

D) 45

91. How many zeros appear at the end of 4 × 15 × 16 × 25 × 27?

A) 2

B) 4

C) 3

D) 5

92. Use each digit 1, 3, 7, and 9 exactly once to form two two-digit integers. What is the smallest possible positive difference between the integers?

A) 12

B) 22

C) 32

D) 18

93. To estimate 29 × 21, a calculator substitutes 30 × 20. Compared with the exact product, the estimate is ____.

A) 9 less

B) 9 greater

C) 20 less

D) 20 greater

94. A data set contains five distinct real numbers.
Quantity A: the mean of the data set.
Quantity B: the median of the data set.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

95. The numbers x and y satisfy $x > y > 0$.
Quantity A: $x^2 - y^2$.
Quantity B: $(x - y)^2$.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

96. The number n is a positive integer.
Quantity A: the greatest common factor of n and n + 1.
Quantity B: 1.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

97. In a triangle, side p lies opposite a 40° angle and side q lies opposite a 70° angle.
Quantity A: the length of p.
Quantity B: the length of q.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

98. Point P lies strictly inside an equilateral triangle. Two of the triangle's sides are labeled r and s.
Quantity A: the perpendicular distance from P to r.
Quantity B: the perpendicular distance from P to s.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

99. A corner of a triangle is cut off by a straight segment joining points strictly inside the two sides meeting at that corner. The small corner piece is removed.
Quantity A: the original triangle's number of sides.
Quantity B: the remaining polygon's number of sides.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

100. Numbers are added to a list in this order: 4, 9, 6, 2, 8, 12, 1. After each addition, the list's range (greatest minus least) is recorded. What completes the recorded series?
0, 5, 5, 7, 7, 10, ____

A) 1

B) 11

C) 10

D) 12

101. What fraction comes next? Express it in lowest terms.
2/5, 5/9, 8/13, 11/17, ____

A) 14/20

B) 15/21

C) 2/3

D) 11/21

102. Which number best continues the pattern?
12, 33, 66, 132, 363, 726, ____

A) 1353

B) 1452

C) 1253

D) 1395

103. Which placement of parentheses makes the expression equal 5?

A) 18 − (6 ÷ 3) + 1

B) 18 − 6 ÷ (3 + 1)

C) (18 − 6) ÷ (3 + 1)

D) (18 − 6) ÷ 3 + 1

104. Three distinct positive integers, each greater than 1, have product 60. What is their greatest possible sum?

A) 12

B) 13

C) 15

D) 19

105. A fraction has a positive integer numerator and denominator and is less than 1. Add 4 to both its numerator and its denominator. How does the new fraction compare with the original?

A) It decreases but remains less than 1.

B) It increases but remains less than 1.

C) It increases to more than 1.

D) It stays equal to the original fraction.

106. What is the smallest positive integer n for which n/6 + n/10 is a whole number?

A) 15

B) 6

C) 10

D) 30

107. An alphabet contains at least three letters; its exact size is unknown. Order matters in each code.
Quantity A: the number of two-letter codes allowing repeated letters.
Quantity B: the number of three-letter codes with no repeated letters.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

108. The number n is an integer greater than 1.
Quantity A: the number of positive factors of n^2.
Quantity B: the number of positive factors of n.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

109. A fair coin is tossed five times independently.
Quantity A: the probability of heads on the fifth toss, given that the first four tosses were heads.
Quantity B: the probability of heads on the first toss.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

110. All four vertices of a square lie on a circle.
Quantity A: the circle's diameter.
Quantity B: half the square's perimeter.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

111. A right prism has pentagonal bases.
Quantity A: the number of its rectangular side faces.
Quantity B: 4.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

112. Triangles K and L each have angles measuring 30°, 60°, and 90°.
Quantity A: the perimeter of K.
Quantity B: the perimeter of L.

A) Quantity A is greater.

B) Quantity B is greater.

C) The two quantities are equal.

D) The relationship cannot be determined from the information given.

Section 3: Reading Comprehension

62 questions | Recommended time: 35 minutes

Literary Passage: Breakfast on the Train

Noor had planned three things to say at breakfast: ask where the train was going, mention the rain, and compliment someone's coat. By the time she reached the dining car, each sentence sounded peculiar. Everyone already knew where the train was going.

The attendant seated her opposite a man reading a newspaper and beside a woman filling a notebook with tiny squares. Noor folded her hands beneath the table. Beyond the glass, wet fields slid past. For a moment, the window held the three passengers' reflections together, like separate pictures fitted into one frame.

At a crossing, a child in a red raincoat lifted both arms and waved. Noor waved back before thinking. So did the man, his newspaper dropping against his plate. The woman raised her pencil in greeting.

"He'll be telling everyone he knows us," the man said.

The woman laughed. "Perhaps we should find out who we are, then."

Names traveled around the table. Noor learned that the squares would become a quilt pattern and that the man was visiting a brother he had not seen in years. When the woman offered her the jam, Noor answered without trying any of the sentences she had rehearsed.

113. What first causes all three passengers to respond to the same event?

A) The attendant introduces them.

B) The newspaper falls to the floor.

C) The woman finishes a quilt.

D) A child waves at the passing train.

114. What does Noor's preparation of possible breakfast remarks suggest?

A) She has been asked to interview the other passengers.

B) She is uncertain how to begin talking with strangers.

C) She expects the attendant to test her memory.

D) She already knows that the man enjoys discussing weather.

115. As used in the final sentence, rehearsed most nearly means ____.

A) practiced beforehand

B) spoken angrily

C) written in code

D) overheard by chance

116. Which statement best describes the passage's point of view?

A) Noor tells the story using I and me.

B) A third-person narrator directly reveals every passenger's private thoughts.

C) A third-person narrator reveals Noor's thoughts but reports the others through their words and actions.

D) The child at the crossing describes the passengers from outside the train.

117. What does the comparison of the reflections to pictures in one frame contribute to the story?

A) It establishes that the passengers previously posed for the same photograph.

B) It anticipates the passengers becoming connected while retaining their separate identities.

C) It suggests that Noor cannot distinguish her reflection from the others.

D) It explains why the passengers cannot see the fields outside.

Informational Passage: Messages with a Backup

Consider a signaling system in which one brief flash means OPEN and one long flash means CLOSED. A disturbed signal might turn a brief flash into a long one, changing the message completely. One way to protect the message is to send each flash three times.

The receiver follows a majority rule: whichever kind of flash appears at least twice determines the message. Suppose the sender transmits three brief flashes, but a disturbance changes one into a long flash. The receiver still observes two brief flashes and correctly reads OPEN. The repeated information provides a backup.

This protection has limits. If two of the three brief flashes change, the receiver observes two long flashes and reads CLOSED. The rule still produces a decision, but that decision is wrong. A disagreement among the received flashes shows that something changed; it does not by itself reveal how many flashes changed.

Repetition also creates overhead: transmitting one message requires three flashes instead of one. The receiver gains protection against a single changed flash at the cost of extra signaling. Whether this trade-off is useful depends on the importance of the message and the likelihood of disturbances. More repetition is therefore a design choice, rather than an automatic improvement in every situation.

118. Which statement best expresses the passage's central idea?

A) Repeating a signal guarantees correct interpretation regardless of disturbances.

B) A signaling system should always transmit messages as quickly as possible.

C) Repeating a signal can protect its meaning, but the protection has limits and requires extra transmission.

D) Long flashes carry more reliable information than brief flashes.

119. Under the stated majority rule, how does the receiver interpret brief, long, brief?

A) OPEN

B) CLOSED

C) The receiver sends no message.

D) The receiver alternates between OPEN and CLOSED.

120. A sender transmits CLOSED, and exactly two flashes change. What follows from the system described?

A) The receiver reads CLOSED because two changes cancel each other.

B) The receiver can identify exactly which flashes changed.

C) The receiver must refuse to make a decision.

D) The receiver reads OPEN even though the sender transmitted CLOSED.

121. In the final paragraph, overhead refers to ____.

A) the extra signaling required beyond the original single flash

B) the space above the receiver

C) the maximum distance between sender and receiver

D) the brightness of the flashes

122. How does the passage develop its explanation?

A) It lists competing historical inventions and selects the oldest.

B) It presents a method, illustrates successful recovery and failure, and then considers the method's cost.

C) It begins with a conclusion and then describes the sender's personal experiences.

D) It compares brief and long flashes only in terms of their brightness.

Humanities Passage: A Title Beside a Painting

Imagine a painting made of a gray rectangle crossed by an orange arc. Without a title, a viewer might see a doorway, a road, or simply two shapes. Add the title Harbor at Noon, and the same marks may suggest a pier and sunlight on water. The paint has not changed, but the viewer's starting point has.

A title can offer a direction without supplying a complete route. It may name a subject, suggest a mood, or invite a question. A title such as Return does not identify who is returning or whether the return is welcome. Its usefulness may lie precisely in the questions it leaves open.

Titles can also acquire an authority they do not deserve. Suppose the artist explains that Harbor at Noon was chosen after the painting was finished. The title still belongs to the work, but it is not evidence that the orange arc was planned as sunlight. Viewers who treat it as a strict set of instructions may overlook other relationships among the shapes.

Refusing to read titles would discard a useful part of the encounter. Treating them as final answers would narrow it. A title is most productive when it enters into conversation with what a viewer notices, rather than replacing the act of looking.

123. What remains unchanged when the title Harbor at Noon is added?

A) The viewer's starting point

B) The possible influence of the title

C) The suggestions available to the viewer

D) The painted rectangle and arc

124. Which detail supports the idea that a title can leave important questions unanswered?

A) The imagined painting contains gray and orange.

B) Harbor at Noon is printed beside the painting.

C) Return does not specify who returns or whether the return is welcome.

D) The orange arc crosses a rectangle.

125. Which statement best captures the author's position?

A) Viewers should ignore every title until an artist explains why it was chosen.

B) Titles can guide interpretation, but viewers should continue examining the artwork rather than accepting the title as a complete explanation.

C) A title accurately records every decision made while an artist worked.

D) Abstract paintings become understandable only when their titles name familiar places.

126. Why does the hypothetical artist's explanation matter to the argument?

A) It proves that the artist never considered sunlight while working.

B) It shows that titles added afterward cannot belong to paintings.

C) It separates the title's influence on viewers from proof of what the artist originally planned.

D) It establishes that every viewer will interpret the orange arc differently.

127. In the sentence "A title can offer a direction without supplying a complete route," direction most nearly means ____.

A) a suggested way of approaching the painting

B) a compass bearing for locating the painting

C) an order that permits no disagreement

D) the physical motion of the painted shapes

128. Which description best fits the author's tone?

A) Mocking and dismissive

B) Alarmed and urgent

C) Triumphant and boastful

D) Thoughtful and measured

Literary Passage: Before the Tide

My brother Soren was arranging pale stones in a spiral on the wet sand. He had spent the morning carrying them from the foot of the dunes, choosing each one for its color. The first curve was wide enough to step inside; the final stones crowded around a dark pebble at the center.

I watched a thin sheet of water creep toward the outer ring. "You should have built it higher up," I said. "The tide will take it."

Soren pressed one last stone into place. "I know."

I reached for a flat stone that had begun to rock in the wash. He caught my wrist gently, then let go. "Watch this part."

The water unstitched the spiral one stone at a time. A curve broke into a dotted line. The dotted line became a scattering. I expected Soren to turn away, but he crouched beside me as if something important had just begun.

For a moment the dark center remained, surrounded by tiny bubbles. Then a wave covered it too. I could no longer point to where the spiral had ended.

On the walk back, I asked whether he would make another tomorrow.

"Different stones," he said. "A different tide."

I stopped looking over my shoulder for what was gone.

129. What does the narrator initially try to do when the water reaches the spiral?

A) Carry every stone back to the dunes

B) Cover the dark pebble with dry sand

C) Ask Soren to leave the beach immediately

D) Pick up a stone that has begun to move

130. Which statement best expresses the story's central idea?

A) Careful planning can prevent every natural change.

B) An experience can be worth creating even when its physical result will not last.

C) A creation has value only if other people preserve it.

D) Working quickly always produces a better design.

131. What does Soren's behavior most strongly suggest about his choice of location?

A) He does not know that tides reach wet sand.

B) He expects the tide's changes to become part of the experience.

C) He hopes the narrator will secretly move the stones.

D) He believes pale stones cannot be moved by water.

132. What does the phrase "The water unstitched the spiral" do?

A) It gives the water an action associated with a person taking apart sewn work.

B) It states that thread actually held the stones together.

C) It compares the spiral's color with a piece of clothing.

D) It introduces a second character who removes the stones.

133. Why is Soren's brief reply "I know" important at that point in the story?

A) It confirms that he has forgotten where he placed the center stone.

B) It resolves the story by explaining every step used to build the spiral.

C) It overturns the assumption that he needs to be warned and redirects attention toward why he welcomes the tide.

D) It shows that the narrator and Soren already agree about preserving the design.

Informational Passage: Why a Bridge Needs Room to Move

A bridge can look motionless while its materials slowly change size. Metal generally expands as it warms and contracts as it cools. Over the length of a bridge, many tiny changes can add up to noticeable movement. A

design that allows no room for this movement can place stress on its parts.
Many bridges therefore include expansion joints: controlled gaps between sections or where the deck meets an approach. A joint may contain sliding metal pieces or flexible material. Its purpose is not to hold the gap at one width. Instead, it permits the gap to narrow or widen while keeping the crossing usable.
The amount of travel allowed by a joint depends on several things, including the length of the bridge section, the material, and the temperatures expected at the site. A longer section usually requires more room for temperature-related movement than a shorter section made from the same material under the same conditions.
The gap also needs attention after construction. Sand or small stones can collect inside it and restrict movement. Inspectors therefore check whether joints remain clear and whether their moving parts still function. A useful gap is not simply an empty space left by accident; it is a working feature whose freedom to change must be preserved.

134. According to the passage, what can interfere with an expansion joint's movement?

A) Sand or small stones collecting in the gap

B) A joint becoming narrower as the bridge warms

C) A bridge section contracting when it cools

D) Inspectors checking the moving parts

135. What is the author's main purpose?

A) To argue that all bridge gaps indicate construction errors

B) To rank bridge materials by their purchase price

C) To show that bridge sections should never change size

D) To explain why bridges include movable gaps and why those gaps need maintenance

136. In the third paragraph, travel most nearly means ____.

A) a trip to another location

B) movement over a permitted distance

C) the speed of passing traffic

D) the route followed by an inspector

137. How is the passage mainly organized?

A) Events are listed as a history of one particular bridge.

B) Several inventors debate which bridge should be built first.

C) An inspector's personal opinion is followed by an unrelated story.

D) A physical cause leads to a design response, followed by factors affecting that response and its upkeep.

138. Two sections use the same metal and experience the same temperature change, but one section is much longer. Which conclusion is best supported?

A) The longer section would generally need more room for temperature-related movement.

B) Both sections must move the same distance because the metal is identical.

C) The shorter section must have the wider joint regardless of its design.

D) The longer section will not need inspection because it has more material.

Expository Passage: When Standings Form a Circle

In a round-robin contest, each participant plays every other participant once. Suppose the rules award one point for a win and no points for a loss, with no tied games. Playing all opponents gives each participant the same number of opportunities to earn points. It does not guarantee a single participant will finish ahead of everyone else.
Consider three players, Aster, Bram, and Cleo. Aster defeats Bram, Bram defeats Cleo, and Cleo defeats Aster. Each finishes with one win and one loss. Their results form a circle rather than a simple ranking from strongest to

weakest.
A rule that breaks a tie by comparing the tied players' results against one another cannot separate these three: those are exactly the results that produced the tie. The organizers would need another rule, perhaps comparing points scored within games or arranging an extra contest. Either method must be announced clearly so that participants know what will count.
Round-robin play is therefore a way to collect results, not a promise that the results will settle every question. Organizers must distinguish between giving everyone an equal schedule and deciding what to do when that schedule produces equal totals. The format answers who will meet whom; additional rules may still be needed to turn the record into final standings.

139. Under the rules in the passage, how many points does a participant receive for one win?

A) zero

B) two

C) one

D) three

140. Which result completes the circle of victories in the example?

A) Aster defeats Cleo.

B) Cleo defeats Aster.

C) Bram defeats Aster.

D) Cleo defeats Bram.

141. Which statement best expresses the passage's central idea?

A) A round-robin contest prevents participants from finishing with equal records.

B) A participant who defeats one opponent must defeat every opponent.

C) An equal schedule can still produce equal totals, so final standings may require additional rules.

D) Comparing tied players' results always identifies a single winner.

142. If the organizers used only the results among Aster, Bram, and Cleo to break their tie, what would happen?

A) Aster would win because that name appears first in the example.

B) Bram would lose the point earned against Cleo.

C) The tie would remain because those results still give each player one win.

D) Cleo would automatically receive an extra point.

143. In the final sentence, record most nearly means ____.

A) an unmatched achievement

B) a sound recording

C) a rule for assigning opponents

D) the collection of game results

144. What role does the three-player example play in the author's explanation?

A) It demonstrates a limit of equal scheduling that the later discussion of tie-breaking rules addresses.

B) It proves that all round-robin contests must end in a three-way tie.

C) It replaces the opening scoring rule with a different system.

D) It describes an exception in which participants play unequal numbers of games.

Literary Passage: Until Noon

I had promised Aunt Della two hours in the sign workshop, from ten until noon. At twelve-thirty I was meeting my friend at the swimming pool. I had even packed my towel, though I wedged the bag beneath the worktable as

soon as I arrived.
At eleven-forty, my uncle set another carton beside my chair. "Good thing you're here for the afternoon," he said. "Della can finish the lettering while you sort these."
I looked toward my aunt. She was measuring a wooden panel and had not heard him. Usually I would have opened the carton and hoped someone noticed the time. Instead, I pulled my bag out from under the table.
"I can sort until noon," I said. My voice sounded louder than the sentence needed. "Then I have to leave."
My uncle glanced at the clock. "Oh. I thought you were staying."
"She told me noon," Aunt Della said, without putting down her ruler. "Give her the small carton. I'll do the other one later."
The room kept its ordinary noises: the scratch of a pencil, the tap of wood against a shelf. At noon I hung my apron on its hook. The whole workshop, to my surprise, did not collapse when I took my bag.

145. Until what time had the narrator originally promised to help Aunt Della?

A) eleven-forty

B) twelve-thirty

C) the end of the afternoon

D) noon

146. Which statement best expresses the passage's central thought?

A) A promise should be abandoned whenever a more enjoyable activity appears.

B) People who work with relatives can never make plans of their own.

C) A workshop succeeds only when everyone works the same hours.

D) Stating a reasonable limit can resolve an expectation without damaging a relationship.

147. What does the narrator's comment about what would "usually" happen suggest?

A) The narrator has never helped in the workshop before.

B) The narrator has previously let unspoken expectations override personal plans.

C) Aunt Della habitually changes the clock to keep helpers longer.

D) The uncle deliberately wants the narrator to miss the swimming trip.

148. In the first paragraph, wedged most nearly means ____.

A) squeezed into a narrow space

B) balanced on a high shelf

C) hidden inside another bag

D) carried through an open doorway

149. What is the effect of the final claim that the workshop "did not collapse"?

A) Its exaggeration reveals how much worse the narrator had imagined the consequences of leaving.

B) It reports that a damaged building has finally been repaired.

C) It establishes that the narrator is responsible for inspecting the building.

D) It predicts that the workshop will fall down after the narrator returns.

Literary Passage: A Very Careful Search

Rain had canceled the afternoon outside, so Tavi agreed to play hide-and-seek with his little cousin Benji. He counted slowly in the hallway, with both hands over his eyes, while a chair scraped across the sitting-room floor. When Tavi entered, a blue sock protruded from beneath the tablecloth. The rest of Benji was hidden behind a chair. Tavi had been ready to announce his discovery immediately. Then the sock went perfectly still, and he heard a small breath being held.
"This will require a very careful search," Tavi said.
He wore a solemn expression as he examined the empty umbrella stand. He looked behind a cushion too thin to

hide a kitten. Under the table, the blue sock trembled. A giggle escaped, followed by a louder cough meant to cover it.
"Nothing here," Tavi announced to the ceiling.
At last, he knelt beside the table and lifted one corner of the cloth. Benji burst out before Tavi could say a word. "You nearly didn't find me!"
"Nearly," Tavi agreed.
Benji ran into the hallway to count. Tavi stood for a moment beside the umbrella stand. Instead of choosing the narrow cupboard he had already considered, he settled behind the sofa and left the toe of one shoe in view.

150. What first shows Tavi where Benji is hiding?

A) Benji calls from the cupboard.

B) The umbrella stand falls over.

C) A blue sock sticks out beneath the tablecloth.

D) A cushion moves across the hallway.

151. Which statement best expresses the passage's central idea?

A) A successful player must always choose the most difficult hiding place.

B) Indoor games cannot be enjoyable when the weather changes plans.

C) Pretending not to notice something always leads to an argument.

D) Making a game enjoyable for another person can matter more than displaying one's own skill.

152. Why does Tavi leave part of his shoe visible at the end?

A) He has forgotten that shoes can be seen.

B) The sofa is the only place large enough to hide anyone.

C) He wants Benji to have a satisfying chance to find him.

D) He hopes Benji will stop playing and leave the room.

153. As used in the passage, solemn most nearly means ____.

A) serious

B) sleepy

C) puzzled

D) embarrassed

154. What creates the gentle humor when Benji says, "You nearly didn't find me"?

A) The reader has been told that Benji is actually hiding in another room.

B) The reader knows that Tavi saw the sock immediately, while Benji believes the search was difficult.

C) Tavi genuinely cannot identify the sock until Benji speaks.

D) Benji knows from the beginning that Tavi has already found him.

Informational Passage: The Push Behind a Straw

People often say that suction pulls a drink up a straw. That phrase describes what the action feels like, but pressure provides a fuller explanation. In an open cup, the liquid's surface is exposed to the surrounding air. Removing some air from the straw lowers the pressure inside it. The greater pressure outside can then push liquid upward through the tube.
As the liquid rises, it forms a column with weight. Supporting a taller column requires a greater pressure difference than supporting a shorter column of the same liquid. Since the pressure inside cannot be reduced without limit, a straw cannot lift liquid to any height merely by being made longer.
A leak above the liquid can interfere with the process. Air entering through the leak reduces the pressure difference that supports the column. A small leak does not always stop the liquid completely: the result depends on how quickly air enters compared with how quickly it is removed. A larger opening can make a useful pressure

difference much harder to maintain.
The tube, then, is not simply a pathway that attracts liquid. It helps separate regions of different pressure. Its height and any openings in its wall matter because they affect the conditions that allow the surrounding air to push the liquid upward.

155. In the open cup described, what is exposed to the surrounding air?

A) Only the bottom of the cup

B) The liquid's surface outside the straw

C) Only the straw's lowest opening

D) The inside of a completely sealed container

156. What is the author's main purpose?

A) To argue that the longest straw always works best

B) To describe the history of how drinking straws were manufactured

C) To compare drinks according to their taste rather than their physical behavior

D) To explain how pressure moves liquid through a straw and why height and leaks affect that process

157. Two straws contain the same liquid and maintain the same pressure difference. Why might the liquid reach the top of the shorter straw but not the taller one?

A) The shorter straw must create a stronger pressure difference despite the stated conditions.

B) The taller column may require more support than that pressure difference can provide.

C) Liquid becomes weightless only when placed inside a shorter straw.

D) Air outside a taller straw stops exerting pressure on the cup.

158. Why does the passage begin with the familiar claim that suction "pulls" a drink upward?

A) To introduce an everyday description that the following explanation makes more precise

B) To establish a claim that the later paragraphs leave unexplained

C) To show that personal feelings are more reliable than physical explanations

D) To change the subject from pressure to the taste of a drink

159. Why is "can interfere" more appropriate than "always stops the liquid" in the discussion of a leak?

A) The author believes all leaks have exactly the same size.

B) The author provides no reason that a leak could affect pressure.

C) The author explains that the outcome depends on the competing rates of air entering and being removed.

D) The author says a leak can matter only when no air enters it.

Literary Passage: The Important News

Maren checked the station's air readings, delivered a sealed case to the laboratory, and attended a briefing on the next supply flight. By evening, she had crossed three modules so often that she no longer looked through their windows at the bright curve of the planet below.
One personal recording was waiting. Her father had promised important news from home. She fastened herself beside the screen and pressed play.
He sat at the kitchen table, wearing the careful expression he used for official photographs. "There have been several developments," he began.
A brown dog dragged an oven mitt into view. Her father stopped, reached down, and missed. The dog retreated behind his chair. A spoon knocked against a bowl; a chair leg scraped the floor. Maren knew each sound before she could picture its source.
Her father laughed. "I could start again, but then you'd miss the important news."
The recording ended with the mitt still uncaptured. Maren let it loop. On the second viewing, she noticed a crooked cupboard handle; on the third, a familiar stain on the tablecloth. Neither had seemed worth noticing

when she ate breakfast there every morning.
Outside the window, an entire coastline shone in the last sunlight. Maren turned back to the small kitchen on the screen.

160. Why does the narrator list Maren's workday quickly but describe the kitchen recording at greater length?

A) The change proves that the recording lasts longer than the entire workday.

B) The brief opening makes the station's technical operations the passage's main subject.

C) The detailed kitchen scene explains how the station's air equipment functions.

D) The change in pacing shifts attention from routine duties to a private experience with emotional importance.

161. What interrupts Maren's father as he begins his recording?

A) A supply flight arrives at the station.

B) A dog drags an oven mitt into view.

C) Maren calls to ask about a cupboard handle.

D) A sealed case falls from the kitchen table.

162. When Maren lets the recording "loop," what does she let it do?

A) become louder

B) erase itself

C) send a reply

D) play repeatedly

163. Which statement best expresses the passage's central idea?

A) Important news must always concern a dramatic public event.

B) Technical work prevents people from remembering their homes.

C) Distance can give familiar, ordinary details a new emotional importance.

D) A spectacular view is always more satisfying than a personal message.

164. Why does Maren's father most likely keep the interruption in the recording?

A) He believes the dog can explain the station's supply schedule.

B) He expects the familiar dog's antics to be something Maren will enjoy seeing.

C) He has forgotten that a recording can be started again.

D) He wants to warn Maren that the kitchen has become unusable.

Informational Passage: Not All Light Reaches the Eye

A red tile does not send red light into the eye under every possible lamp. Its appearance depends both on the light reaching it and on which parts of that light the surface reflects. Consider an idealized tile that does not glow and reflects only red light. White light contains a mixture of colors. Under white illumination, this tile reflects the red component and absorbs the others, so it looks red.
Now replace the white lamp with one that supplies only blue light. There is no red component for the tile to reflect. The tile therefore looks very dark. An ideal white tile, which reflects all the visible colors reaching it, looks blue under that same blue lamp. The materials have not changed; the available illumination has.
A filter adds another selective step. It transmits certain colors and blocks others. A red-only filter cannot turn blue light into red light: if only blue light reaches it, no light passes through. A filter may be placed before the tile or between the tile and the observer's eye.
Ordinary surfaces and filters are not such perfect selectors, so actual contrasts may be less absolute. Still, appearance depends on the light that survives the whole path from source to surface to eye.

165. What is the author's main purpose?

A) To show that a tile changes its material whenever the lamp changes

B) To rank visible colors according to their usefulness in decoration

C) To explain how illumination, surface reflection, and filtering together affect perceived color

D) To argue that a filter creates colors absent from the original light

166. According to the passage, how does the ideal white tile appear under a lamp supplying only blue light?

A) red

B) white

C) yellow

D) blue

167. In the phrase "another selective step," selective most nearly means ____.

A) allowing certain colors through while excluding others

B) changing all colors into the same new color

C) letting every available color pass without restriction

D) making an unpredictable choice unrelated to color

168. An ideal red-only lamp shines on the ideal red tile. An ideal blue-only filter is placed between the tile and the observer's eye. How should the tile appear?

A) Very dark, because the filter blocks the red light reflected by the tile.

B) Blue, because the filter converts reflected red light into blue light.

C) Red, because a filter after the tile cannot affect what reaches the eye.

D) White, because the lamp and filter supply all colors together.

169. Why does the final paragraph mention that ordinary surfaces and filters are imperfect selectors?

A) To withdraw the claim that illumination affects appearance

B) To introduce a history of tile manufacturing unrelated to the examples

C) To qualify the idealized examples while preserving the general explanation

D) To insist that the earlier examples predict every actual shade exactly

Humanities Passage: Marking a Threshold

When a ribbon is cut at a new building's entrance, the scissors do not finish the roof or make the stairs safe. Workers have already completed those tasks. Yet the ribbon cutting can mark the beginning of public use. It gives a visible form to a change that construction work alone does not announce to everyone at once.

A graduation ceremony has a comparable role. The learning recognized there took place over months or years. Walking across a platform does not create that earlier learning. It brings people together to acknowledge it. Someone unable to attend has not therefore lost the knowledge gained beforehand.

Calling such actions empty because they do not perform the underlying work overlooks their public function. A ceremony can provide a shared signal: now this place is open, or now this achievement is being recognized. Its participants can understand a transition together rather than discover it separately.

Ceremonies are punctuation in a shared story. They do not supply all the words, but they help a group recognize where one section ends and another begins. The ribbon, platform, and gathering are different forms of the same impulse to mark a threshold. Their significance lies partly in making a change visible to others, not merely in altering a physical object.

170. Which task does the opening paragraph say the ribbon cutting does not perform?

A) Marking the beginning of public use

B) Finishing the building's roof

C) Giving a change a visible form

D) Announcing a transition to a group

171. Which situation would best show that a ceremony has fulfilled the public function described in the passage?

A) Workers still need to repair a building before anyone can enter safely.

B) People who had heard different opening dates leave knowing that a building is now open.

C) A speaker uses the occasion to teach an entire course that nobody has studied.

D) Guests leave without knowing which achievement the gathering was intended to recognize.

172. In the final paragraph, threshold most nearly means ____.

A) a point of transition into a new stage

B) only the wooden strip beneath a doorway

C) a fixed quantity required for a calculation

D) a condition that never changes

173. What does the metaphor "Ceremonies are punctuation in a shared story" suggest?

A) Ceremonies create every achievement in the same way that punctuation supplies every word.

B) A ceremony's value depends on whether participants know spelling rules.

C) Ceremonies help people recognize the structure of changes whose substance comes from other activities.

D) Every community must use exactly the same ceremony for every transition.

174. How do the ribbon-cutting and graduation examples relate to each other?

A) They present opposing claims about whether any ceremonies have value.

B) They trace the historical development of one ceremony into another.

C) They show that physical construction causes academic learning.

D) Both illustrate completed work followed by public recognition of a transition.

Section 4: Mathematics

64 questions | Recommended time: 45 minutes

175. Four equally spaced marks on a number line are labeled, from left to right, −1.6, P, Q, and −0.4. What number is at Q?

A) −0.8

B) −1.2

C) 0.8

D) −1.0

176. Which decimal rounds to 2.7 to the nearest tenth and to 2.65 to the nearest hundredth?

A) 2.646

B) 2.658

C) 2.652

D) 2.704

177. A sailmaker uses 2/5 of a roll of fabric, then sets aside 3/4 of the remaining fabric for repairs. What fraction of the original roll is still available for other work?

A) 1/20

B) 3/10

C) 9/20

D) 3/20

178. If n is any odd integer, which expression must be divisible by 4?

A) $n^2 + 1$

B) $n^2 - 1$

C) $2n$

D) $n + 1$

179. If $3r + s = 20$, what is the value of $6r + 2s$?

A) 20

B) 40

C) 23

D) 60

180. The variables x and y satisfy $y = 8 - 2x$. Which change in x causes y to increase by 6?

A) x increases by 3.

B) x decreases by 6.

C) x increases by 6.

D) x decreases by 3.

181. An empty freight box weighs 3 kilograms. Each block placed inside weighs 5 kilograms. The loaded box must weigh at least 24 kilograms but less than 34 kilograms. Which list includes all possible numbers of blocks?

A) 5, 6

B) 4, 5

C) 4, 5, 6

D) 5, 6, 7

182. Two numbers u and v satisfy u + v = 18 and u − v = 4. What is uv?

A) 44

B) 63

C) 77

D) 81

183. A flat slice passes through the interior of a cube parallel to its bottom face. What shape is the cross section?

A) triangle

B) regular hexagon

C) circle

D) square

184. How many diagonals can be drawn from one vertex of a convex octagon?

A) 6

B) 7

C) 5

D) 8

185. Point (−3, 5) is translated 4 units to the right and then rotated 90° clockwise about the origin. A 90° clockwise rotation sends (a, b) to (b, −a). What is the final point?

A) (5, −1)

B) (−5, 1)

C) (1, −5)

D) (9, 3)

186. A clock is set correctly at 9:00 a.m. It loses 45 seconds during each actual hour. What time does it show when the actual time is 3:00 p.m. that day?

A) 2:59:15 p.m.

B) 2:55:30 p.m.

C) 3:04:30 p.m.

D) 2:54:00 p.m.

187. A small metal panel has an area of 0.07 square meter. What is its area in square centimeters?

A) 7 square centimeters

B) 70 square centimeters

C) 700 square centimeters

D) 7,000 square centimeters

188. A skating-rink owner surveys only customers attending the Friday evening session. Most prefer longer evening hours. Why might this survey poorly represent all customers?

A) The owner asked about hours instead of ticket prices.

B) Evening customers are unable to express preferences.

C) A survey must contain equal numbers of every possible opinion.

D) Customers who attend at other times were not included.

189. A tray contains 3 brass gears and 2 steel gears. Two gears are selected at random without replacement. What is the probability that they are made of different materials?

A) 3/10

B) 3/5

C) 1/2

D) 2/5

190. A trail report lists 28 trails. Of these, 19 have shade and 15 have water access. Every listed trail has at least one of these features. How many have both?

A) 6

B) 4

C) 9

D) 13

191. A number is 5 units to the right of −2 on a number line. What is the opposite of that number?

A) −3

B) 3

C) −7

D) 7

192. A diving service has short and long air hoses in a ratio of 2:3. After it adds 6 short hoses and no long hoses, the ratio becomes 4:3. How many hoses did it have originally?

A) 9

B) 15

C) 12

D) 21

193. In base five, digits run from 0 through 4; for example, 12 means 1 × 5 + 2. What is 24 + 13, with both inputs and the answer written in base five?

A) 37

B) 22

C) 42

D) 41

194. Which equation has no solution?

A) x + 7 = 9

B) 2x + 7 = 2x + 9

C) 2x + 7 = 9

D) 2x + 7 = 2x + 7

195. Which expression is equivalent to 6pq + 9p?

A) 3p(2q + 9)

B) 3(2pq + 3)

C) 3p(2q + 3)

D) p(6q + 9p)

196. One pump can drain a full tank in 6 minutes, and another can drain the same tank in 12 minutes. Each works at a constant rate. How long do they take together?

A) 3 minutes

B) 4 minutes

C) 6 minutes

D) 9 minutes

197. A machine outputs $x + 4$ when $x < 0$ and x^2 when $x \geq 0$. What is the sum of its outputs for inputs -6 and 3?

A) -3

B) 7

C) 13

D) 45

198. In triangle ABC, M is the midpoint of AB and N is the midpoint of AC. The segment MN is parallel to BC. If BC = 18 centimeters, how long is MN?

A) 6 centimeters

B) 12 centimeters

C) 36 centimeters

D) 9 centimeters

199. Which solid has exactly one vertex?

A) cylinder

B) sphere

C) cone

D) cube

200. A square plate has sides of 10 centimeters. A rectangular notch, 3 centimeters wide along an edge and 2 centimeters deep, is cut from the middle of one side without reaching a corner. What is the remaining plate's perimeter?

A) 37 centimeters

B) 40 centimeters

C) 50 centimeters

D) 44 centimeters

201. Port B's clock is 2 hours ahead of Port A's. A boat departs Port A at 8:40 a.m. local time and arrives at Port B at 1:10 p.m. local time on the same day. How long is the trip?

A) 2 hours 30 minutes

B) 4 hours 30 minutes

C) 6 hours 30 minutes

D) 1 hour 30 minutes

202. Wood finish costs $9 for a 2-liter can or $3.60 for a 750-milliliter can. Which statement correctly compares their prices per liter?

A) The 750-milliliter can costs $0.30 less per liter.

B) The 2-liter can costs $0.90 less per liter.

C) The 2-liter can costs $0.30 less per liter.

D) Both cans have the same price per liter.

203. Density is found by dividing mass by volume. If mass is measured in grams and volume in cubic centimeters, which unit correctly expresses density?

A) cubic centimeters per gram

B) grams times cubic centimeters

C) centimeters per gram

D) grams per cubic centimeter

204. During 3 shifts, a dock crew handled an average of 8 crates per shift. During 5 other shifts, it averaged 12 crates per shift. What was the average for all 8 shifts?

A) 10.5 crates per shift

B) 10 crates per shift

C) 11 crates per shift

D) 20 crates per shift

205. A ticket is chosen at random from tickets numbered 1 through 12. You learn that its number is greater than 8. Given that information, what is the probability that its number is prime?

A) 1/4

B) 1/12

C) 1/3

D) 5/12

206. Ten instrument readings are summarized as follows:
Reading 2: four occurrences.
Reading 3: one occurrence.
Reading 5: five occurrences.
What is the median?

A) 3

B) 3.6

C) 5

D) 4

207. Which number is a perfect cube but is not a perfect square?

A) 16

B) 36

C) 64

D) 8

208. Start with the fraction 4/9. Multiply its numerator by 3 and its denominator by 2, then simplify. What fraction results?

A) 4/3

B) 2/3

C) 8/27

D) 3/2

209. For which set does multiplying any two members always give another member, while adding any two members never gives a member?

A) odd integers

B) even integers

C) positive integers

D) negative integers

210. Which number has no reciprocal?

A) −1

B) 0

C) 1/2

D) 10

211. Assume x ≠ y. Which expression represents the sum of x and y divided by their difference, x minus y?

A) x + y/(x − y)

B) (x − y)/(x + y)

C) (x + y)/(x − y)

D) x/y − x

212. If a = b/(b + 1) and a ≠ 1, which expression equals b?

A) a/(a − 1)

B) a/(1 − a)

C) 1/(a − 1)

D) a − 1

213. A linear function has f(2) = 9 and f(6) = 21. What is f(0)?

A) −3

B) 6

C) 3

D) 9

214. A rental shop charges $7 for the first hour or any part of it, then $3 for each additional half hour or any part of one. Which rental duration could produce a $19 charge?

A) 2 hours 30 minutes

B) 3 hours 15 minutes

C) 1 hour 45 minutes

D) 2 hours 45 minutes

215. How many lines of reflection symmetry does a rectangle that is not a square have?

A) 2

B) 1

C) 4

D) 8

216. A circle lies inside triangle ABC and touches all three sides. Tangent segments from the same vertex to the circle have equal lengths. If AB = 13, AC = 15, and BC = 14, what is the length from A to either tangency point on its sides?

A) 7

B) 6

C) 8

D) 14

217. A closed triangular pyramid has four triangular faces. Each face has three edges, and every edge belongs to two faces. How many distinct edges does the pyramid have?

A) 4

B) 8

C) 6

D) 12

218. A graduated cylinder contains 72 milliliters of water. After a solid object that does not absorb water is completely submerged, the reading is 89.5 milliliters. No water spills. Given that 1 milliliter equals 1 cubic centimeter, what is the object's volume?

A) 0.0175 cubic centimeters

B) 72 cubic centimeters

C) 17.5 cubic centimeters

D) 161.5 cubic centimeters

219. A ventilation fan moves 90 cubic meters of air per hour. Given that 1 cubic meter equals 1,000 liters, how many liters per second is that?

A) 25 liters per second

B) 1.5 liters per second

C) 90 liters per second

D) 1,500 liters per second

220. A timer stops at a randomly selected instant between 0 and 60 seconds, with equal-length intervals equally likely. What is the probability that it stops after 12 seconds but before 27 seconds?

A) 1/5

B) 9/20

C) 3/5

D) 1/4

221. A fabric maker records whether each customer chooses cotton, wool, or silk. Which statistic identifies the most frequently chosen fabric?

A) mean

B) median

C) range

D) mode

222. Set A contains three numbers and has median 4. Set B contains three numbers and has median 8. Which statement must be true about the median of all six numbers together?

A) It is always 6.

B) It is at least 4 and at most 8.

C) It is always 4.

D) It is always 8.

223. What is the greatest integer strictly less than −2.6?

A) −2

B) 2

C) 3

D) −3

224. The share of catalog orders placed online rises from 40% to 50%. Which pair correctly gives the percentage-point increase and the relative percent increase?

A) 10 percentage points; 10%

B) 10 percentage points; 25%

C) 25 percentage points; 10%

D) 25 percentage points; 25%

225. Two positive decimal numbers are each rounded down to the nearest whole number. Those whole numbers add to 18. Which value could NOT be the sum of the two original decimals?

A) 18.2

B) 19.1

C) 19.8

D) 20.0

226. A rectangular grid has r rows and c columns, with r > 1 and c > 1. Which expression counts the tiles in its outer border, counting each corner tile once?

A) 2r + 2c

B) r × c

C) 2(r − 2) + 2(c − 2)

D) 2r + 2c − 4

227. What is the coefficient of x in −7x + 4?

A) 7

B) −7

C) 4

D) −3

228. An automated cart travels 120 meters at 2 meters per second, then returns the same 120 meters at 3 meters per second. What is its average speed for the whole trip?

A) 2.5 meters per second

B) 5 meters per second

C) 1.2 meters per second

D) 2.4 meters per second

229. Which condition on a positive number x is equivalent to 1/x > 1/5?

A) x > 5

B) 0 < x < 1/5

C) 0 < x < 5

D) x > 1/5

230. In a circle with center O, chord AB does not pass through O. Segment OM is perpendicular to AB, with M on AB. Which statement must be true?

A) AM = OM

B) AB = 2 × OA

C) AM = MB

D) OM = OA

231. Which single transformation reverses the clockwise order of a triangle's labeled vertices while preserving all its side lengths?

A) a reflection

B) a translation

C) a 90° rotation

D) an enlargement with scale factor 2

232. Water fills a cylindrical container of radius 2 centimeters to a depth of 25 centimeters. All the water is poured into an empty cylinder of radius 5 centimeters with sufficient capacity. What is the new depth?

A) 10 centimeters

B) 6.25 centimeters

C) 4 centimeters

D) 62.5 centimeters

233. Accuracy means closeness to the true value; precision means closeness of repeated readings to each other. A true 100-gram mass gives Scale A readings of 102, 102, 102 grams and Scale B readings of 99, 100, 101 grams. Which statement is correct?

A) Scale A is more precise, and Scale B is more accurate.

B) Scale A is both more precise and more accurate.

C) Scale B is both more precise and more accurate.

D) The scales have the same precision and accuracy.

234. A surveyor faces north and turns clockwise until facing west for the first time. Through how many degrees does the surveyor turn?

A) 90°

B) 270°

C) 180°

D) 360°

235. A bin measures 30 × 20 × 10 centimeters internally. Each box measures 6 × 5 × 4 centimeters and must be aligned respectively with those bin dimensions, without rotation. Packed in straight rows and flat layers, how many boxes fit?

A) 50

B) 20

C) 40

D) 60

236. Two machines mark a card independently. Machine A adds a star with probability 1/3, and machine B adds a star with probability 1/4. A card qualifies if at least one machine adds a star. What is the probability it qualifies?

A) 1/2

B) 7/12

C) 1/12

D) 5/12

237. An unordered pair of distinct numbers is selected from 1, 2, 3, 4, and 5, with every pair equally likely. What is the probability that the sum is at least 8?

A) 1/5

B) 1/10

C) 3/10

D) 2/5

238. For this question, the lower quartile is the median of the lower half after the overall median is excluded. What is the lower quartile of 3, 5, 8, 11, 14, 18, 24?

A) 3

B) 5

C) 8

D) 11

Section 5: Language

60 questions | Recommended time: 30 minutes

239. Which sentence correctly shows that the handwriting belongs to another person?

A) The note was in someones else handwriting.

B) The note was in someone elses' handwriting.

C) The note was in someone's else handwriting.

D) The note was in someone else's handwriting.

240. Which sentence correctly uses semicolons to separate three city-and-state entries?

A) The route ends in Salem; Oregon, Boise; Idaho, and Reno; Nevada.

B) The route ends in Salem, Oregon; Boise; Idaho, and Reno, Nevada.

C) The route ends in Salem, Oregon; Boise, Idaho; and Reno, Nevada.

D) The route ends in Salem, Oregon, Boise, Idaho; and Reno; Nevada.

241. Which sentence correctly punctuates a question about a short story titled Night Ferry?

A) Have you read "Night Ferry"?

B) Have you read "Night Ferry?"

C) Have you read, "Night Ferry"?

D) Have you read "Night Ferry".

242. Which sentence uses capitalization correctly?

A) Our model shows mars and its two moons.

B) Our model shows Mars and its two moons.

C) Our model shows Mars and its Two Moons.

D) Our Model shows mars and its two moons.

243. Which sentence uses capitalization correctly?

A) The actor delivered a Shakespearean speech in a modern costume.

B) The actor delivered a shakespearean speech in a modern costume.

C) The actor delivered a Shakespearean Speech in a modern costume.

D) The actor delivered a Shakespearean speech in a Modern Costume.

244. Which spelling correctly completes the sentence?
The sealed compartment increased the raft's ____.

A) bouyancy

B) buoyency

C) buoyancy

D) buyoancy

245. Which word is spelled correctly?

A) rythm

B) rhythym

C) rhythem

D) rhythm

246. Which word correctly completes the sentence in formal written English?
The foreman requested that each latch ____ tested before shipment.

A) was

B) were

C) be

D) being

247. Which word correctly completes the sentence?
A drainage trench has been ____ beside the runway.

A) dug

B) dig

C) digged

D) digging

248. Which revision correctly compares this crane's reach with the reaches of all the other cranes in the yard?

A) This crane's reach is longer than any crane in the yard.

B) This crane's reach is longer than that of any crane, including itself, in the yard.

C) This crane's reach is longer than those of itself in the yard.

D) This crane's reach is longer than that of any other crane in the yard.

249. Which word correctly completes the sentence?
The drone hovered above a ____ marker that did not move.

A) stationery

B) stationary

C) stationer

D) stationed

250. Which sentence preserves the restriction on who may act in "Only the night operator may restart the press"?

A) No one except the night operator may restart the press.

B) The night operator may restart only the press.

C) The operator may restart the press only at night.

D) The night operator may only restart the press.

Editing Passage: Choosing a Shipping Cushion

(1) A company shipping ceramic knobs must choose padding that prevents chips without making each package much heavier. (2) In an initial test, molded paper trays kept all the knobs intact, but the trays occupied almost half the box. (3) Inflatable cushions used less storage space before packing and added very little weight. (4) However, knobs sometimes shifted between the cushions during a sudden drop. (5) The company then tried a fitted paper divider with one small cushion placed above it. (6) This arrangement held the knobs apart while using less material than a full tray. (7) This packaging is the best choice for every fragile product shipped by any company.

251. Which additional finding would most strengthen the claim in sentence 6?

A) The knobs were available in six colors.

B) The company printed its name in blue on each box.

C) In repeated trials, the combined arrangement used fewer grams of packaging than full trays and prevented the knobs from touching.

D) Most shipments left the factory on weekday mornings.

252. The writer wants two paragraphs: one comparing the original options and one explaining the combined approach. Where should the second paragraph begin?

A) Before sentence 2

B) Before sentence 3

C) Before sentence 7

D) Before sentence 5

253. Which revision of sentence 7 makes a conclusion supported by the tests described?

A) The tests prove that every company should immediately stop using paper trays.

B) For these ceramic knobs, the divider-and-cushion arrangement offers a useful balance of protection and material use.

C) Inflatable cushions are always unsuitable for shipping any kind of object.

D) No further testing could ever improve this arrangement for any fragile product.

254. Which sentence correctly separates the two coordinate adjectives describing the crate?

A) The workers lifted the heavy awkward, crate.

B) The workers lifted, the heavy awkward crate.

C) The workers lifted the heavy awkward crate.

D) The workers lifted the heavy, awkward crate.

255. Marin and Keon jointly own one workshop. Which sentence correctly shows that shared ownership?

A) Marin's and Keon's workshop occupies one room.

B) Marin and Keons' workshop occupies one room.

C) Marins and Keon's workshop occupies one room.

D) Marin and Keon's workshop occupies one room.

256. Which sentence correctly capitalizes a job title used as a description after a person's name?

A) We spoke with Helen Tran, the director of operations.

B) We spoke with Helen Tran, the Director of Operations.

C) We spoke with Helen tran, the director of operations.

D) We spoke with Helen Tran, the director of operations Manager.

257. Which sentence correctly writes the initials for Global Positioning System?

A) The hikers carried a gps receiver.

B) The hikers carried a Gps receiver.

C) The hikers carried a GPS receiver.

D) The hikers carried a gPS receiver.

258. Which word is spelled correctly?

A) sincerly

B) sincerely

C) sincereley

D) sinserely

259. Which spelling correctly completes the sentence?
The ____ puppy hid the gardener's gloves.

A) mischievious

B) mischevous

C) mischievous

D) mischivous

260. Which word is spelled correctly?

A) perserverance

B) perseverence

C) persevarance

D) perseverance

261. Which word correctly completes the sentence?
Of all the proposed routes, this one is the ____.

A) worse

B) badly

C) baddest

D) worst

262. Adira began practicing in March and still practices every morning now. Which phrase correctly completes the sentence?
Since March, Adira ____ every morning.

A) has been practicing

B) will be practicing

C) had practiced

D) was practicing

263. Choose the pronoun that makes the sentence mean that Ravi trusts Elena more than I trust Elena.
Ravi trusts Elena more than ____.

A) me

B) my

C) I

D) mine

264. Which pair correctly completes the sentence?
The lemon's sourness ____ the rich sauce, and the chef accepted the guest's ____.

A) compliments; complement

B) complements; compliment

C) complements; complement

D) compliments; compliment

265. Which sentence has the same meaning as "Not every compartment is sealed"?

A) No compartment is sealed.

B) At least one compartment is not sealed.

C) Every compartment is sealed.

D) Exactly one compartment is sealed.

Editing Passage: Making a Paper Funnel

(1) A temporary paper funnel can guide dry rice into a narrow-necked bottle without scattering grains across the counter. (2) First, cut a slit from the edge of a paper circle to its center. (3) Tape the overlapping edges together so that the cone keeps its shape. (4) Overlap the two cut edges to form a cone, leaving a small opening at the point. (5) The small opening should fit inside the bottle's neck, while the upper rim remains above it. (6) Test the funnel with a few grains before pouring the rest, since an opening that is too small may clog. (7) Use this funnel for dry ingredients rather than liquids, which can soften the paper.

266. Which order of sentences 2, 3, and 4 gives the clearest sequence of steps?

A) 2, 4, 3

B) 3, 2, 4

C) 4, 3, 2

D) 2, 3, 4

267. Which opening phrase could be added to sentence 6 to clarify the purpose of testing the funnel?

A) Despite the paper's color,

B) To check that the opening works,

C) At the same time last year,

D) Because every bottle is identical,

268. The directions are intended for children who may not know the word clog. Which replacement for the final clause of sentence 6 best clarifies its meaning?

A) because grains may bunch together and block an opening that is too small.

B) because funnels are useful in several different rooms.

C) because rice comes in many varieties and colors.

D) because paper can be folded in more than one direction.

269. Which sentence correctly punctuates the compound modifier before route?

A) We followed a five mile route.

B) We followed a five-miles route.

C) We followed a five, mile route.

D) We followed a five-mile route.

270. The speaker is addressing Rosa. Which sentence correctly punctuates that direct address?

A) Please bring, the blue folder Rosa.

B) Please, bring the blue folder Rosa.

C) Please bring the blue folder, Rosa.

D) Please bring the blue, folder Rosa.

271. Which sentence correctly places the period with a parenthetical phrase that is not a complete sentence?

A) The detour added two miles (about thirty minutes).

B) The detour added two miles (about thirty minutes.)

C) The detour added two miles. (about thirty minutes)

D) The detour added two miles (about thirty minutes). .

272. Which sentence correctly capitalizes the first word of a directly quoted complete sentence?

A) The ranger said, "follow the orange markers."

B) The ranger said, "follow the Orange markers."

C) The ranger said, "follow the orange Markers."

D) The ranger said, "Follow the orange markers."

273. Which sentence correctly capitalizes the first-person pronoun?

A) Across the courtyard, i heard a door close.

B) Across the courtyard, I heard a door close.

C) Across the courtyard, i Heard a door close.

D) Across the courtyard, i heard a Door close.

274. Which word is spelled correctly?

A) calender

B) calandar

C) calendar

D) callendar

275. Which word is spelled correctly?

A) guarentee

B) garantee

C) guarantee

D) guarante

276. Which pair correctly completes the sentence?
Half of the cables ____ new, but half of the wire ____ brittle.

A) is; are

B) are; is

C) are; are

D) is; is

277. Which sentence uses the correct word order for an indirect question?

A) Do you know where is the spare spool?

B) Do you know where the spare spool is?

C) Do you know where does the spare spool?

D) Do you know where the spare spool?

278. Which word correctly completes the sentence?
After the carpenter polished it, the handle felt ____.

A) smooth

B) smoothly

C) smoothness

D) smoothen

279. Which word correctly completes the sentence?
A basic ____ of the design is that every part can be replaced separately.

A) principle

B) principal

C) principally

D) principality

280. Which pair correctly completes the sentence?
Lina plans to ____ from Brazil and ____ to Canada.

A) immigrate; emigrate

B) emigrate; immigrate

C) emigrate; emigrate

D) immigrate; immigrate

281. A control panel says, "Up to six devices can be connected at once." Which sentence accurately expresses the stated upper limit?

A) At least six devices must be connected at once.

B) Exactly six devices must be connected at all times.

C) More than six devices can always be connected at once.

D) No more than six devices can be connected at once.

Editing Passage: Names with Useful Descriptions

(1) A restaurant menu can retain traditional dish names while adding brief descriptions for newcomers. (2) A name alone may not tell a guest whether a dish is baked, fried, or served cold. (3) A short phrase such as "steamed dumplings with mushrooms" provides useful details without replacing the original name. (4) Some owners worry that explanations will make their menus crowded. (5) Menus also include prices for hot drinks. (6) Good descriptions should give concrete information about the food rather than merely promising that it is delicious. (7) The result would be a menu that welcomes unfamiliar readers without discarding the kitchen's own vocabulary.

282. Which replacement for sentence 5 best responds to the concern in sentence 4?

A) A concise description can often fit on one line beneath each dish name.

B) Guests should already know every dish name before they arrive.

C) Hot drinks should be listed in a different section from cold drinks.

D) Each explanation ought to fill an entire page of the menu.

283. A restaurant calls a dish Pierogi; it consists of boiled dumplings filled with potato and onion. Which menu entry best follows both recommendations in the passage?

A) Delicious Dumplings: everyone's favorite treat.

B) Pierogi: the finest food you will ever taste.

C) Pierogi: boiled dumplings filled with potato and onion.

D) Boiled dumplings filled with potato and onion.

284. Which sentence correctly writes the plural decade?

A) Technology changed rapidly during the 1990s.

B) Technology changed rapidly during the 1990's.

C) Technology changed rapidly during the 1990s'.

D) Technology changed rapidly during the 1990s's.

285. Which sentence correctly punctuates a month-day-year date within a sentence in American English?

A) The archive opened on April 9, 2025 in the renovated mill.

B) The archive opened on April, 9, 2025, in the renovated mill.

C) The archive opened on April 9, 2025, in the renovated mill.

D) The archive opened on April 9 2025, in the renovated mill.

286. Which sentence correctly capitalizes the organization's full name while leaving its general description lowercase?

A) The World meteorological Organization is an international organization.

B) The world Meteorological Organization is an international organization.

C) The World Meteorological Organization is an international organization.

D) The World Meteorological Organization is an International Organization.

287. Which sentence correctly capitalizes the conventional name suffix meaning Junior?

A) The certificate lists Miles Carter jr. as the recipient.

B) The certificate lists Miles Carter JR. as the recipient.

C) The certificate lists Miles Carter jR. as the recipient.

D) The certificate lists Miles Carter Jr. as the recipient.

288. Select the correctly spelled noun meaning ease of use or suitability.

A) conveniance

B) convenience

C) conveneince

D) conveniece

289. Which spelling correctly completes the sentence?
The change in volume was immediately ____.

A) noticable

B) noticeble

C) noticceable

D) noticeable

290. Which word names a person's inner sense of right and wrong and is spelled correctly?

A) conscience

B) consience

C) consciense

D) conscienc

291. Which word correctly completes the sentence?
Each pilot must ____ the checklist.

A) reviews

B) review

C) reviewed

D) reviewing

292. Which word correctly completes the sentence?
They adjusted the light without ____ the camera.

A) move

B) to move

C) moved

D) moving

293. Which word correctly completes the sentence?
The package goes to ____ finishes first.

A) whoever

B) whomever

C) whose

D) whom

294. Which pair correctly completes the sentence?
The crew was ____ when we arrived because they had ____ checked the equipment.

A) already; all ready

B) all ready; all ready

C) all ready; already

D) already; already

295. Which pair correctly completes the sentence?
The expert will ____ the antique desk and ____ its owner of the result.

A) apprise; appraise

B) appraise; apprise

C) appraise; appraise

D) apprise; apprise

296. Which revision uses standard formal American English to state that an inspection found zero defects?

A) The inspection didn't find no defects.

B) The inspection found hardly no defects.

C) The inspection never found none of the defects.

D) The inspection found no defects.

Editing Passage: Above the Harbor

(1) Yesterday I rode to the top floor of the new observation tower beside the harbor. (2) As the elevator rose, the streets below narrowed into lines between the buildings. (3) I remembered standing on the same site two summers earlier, when only a fenced pit marked where the tower would be. (4) A crane had lowered steel beams past us while my uncle described the height of the future structure. (5) Now the doors opened, and I stepped onto a floor that had existed only in his drawings. (6) From the glass wall, you could trace the whole curve of the harbor.

297. Which replacement for "Now" at the start of sentence 5 most clearly signals a return from the memory to yesterday's elevator ride?

A) Two summers before that,

B) At the excavation site,

C) Back in the elevator,

D) Before the tower was planned,

298. The writer wants sentence 6 to continue the first-person account of a personal experience yesterday. Which revision best maintains both that viewpoint and that time frame?

A) From the glass wall, I could trace the whole curve of the harbor.

B) From the glass wall, visitors will trace the whole curve of the harbor.

C) From the glass wall, she could trace the whole curve of the harbor.

D) From the glass wall, I will trace the whole curve of the harbor.

Answer Key

Question numbers continue across all five sections.

Verbal Skills

1. C	2. B	3. A	4. D	5. B	6. A	7. C	8. A
9. D	10. B	11. C	12. A	13. B	14. C	15. D	16. A

Detailed Explanations

Verbal Skills

1. HSPT-V11-001 - Answer C: agree
To concur is to agree with another person or share the same judgment about something.

2. HSPT-V11-002 - Answer B: economical
A frugal person uses money or other resources economically, taking care to avoid unnecessary spending.

3. HSPT-V11-003 - Answer A: irregular
Sporadic events occur at irregular intervals rather than continuously or according to a consistent schedule.

4. HSPT-V11-004 - Answer D: figurative
A literal interpretation follows the exact words, whereas a figurative interpretation recognizes meaning beyond their direct sense.

5. HSPT-V11-005 - Answer B: manageable
Something cumbersome is awkward or difficult to handle; something manageable can be handled without such difficulty.

6. HSPT-V11-006 - Answer A: defiant
Deferential behavior shows respectful submission to another person, while defiant behavior openly resists that person's authority.

7. HSPT-V11-007 - Answer C: letter
An encore follows a completed performance, just as a postscript is an addition after the main text of a letter.

8. HSPT-V11-008 - Answer A: past
A forecast concerns what may happen in the future; a recollection concerns something that happened in the past.

9. HSPT-V11-009 - Answer D: reservation
A veto prevents a proposal from taking effect, just as a cancellation prevents a reservation from remaining in effect.

10. HSPT-V11-010 - Answer B: axle
An axle supports rotation, matching the movement permitted by a hinge, swivel, or pivot rather than fixing parts rigidly.

11. HSPT-V11-011 - Answer C: mutter
To mutter is to speak quietly, whereas gestures, nods, and winks can communicate without spoken words.

12. HSPT-V11-012 - Answer A: transactions
Each is a transaction involving an exchange, although the method of setting terms or making payment differs.

13. HSPT-V11-013 - Answer B: the middle drawer
Only a middle-drawer envelope makes exactly one label true: the top label; either other location makes two labels true.

14. HSPT-V11-014 - Answer C: Di
The clockwise seating order must be Ada, Bo, Cy, Di, so Di sits immediately clockwise from Cy.

15. HSPT-V11-015 - Answer D: A garment labeled WOOL is washed in a machine.
A wool-labeled garment washed by machine directly violates the claimed requirement; observations about unlabeled garments do not.

16. HSPT-V11-016 - Answer A: touchable
Something tangible has a physical form that can be touched, rather than existing only as an idea.

17. HSPT-V11-017 - Answer B: refill
To replenish a supply is to refill it or restore the amount available after some has been used.

18. HSPT-V11-018 - Answer B: superficial
A cursory examination is quick and superficial, giving a subject little detailed attention rather than examining it thoroughly.

19. HSPT-V11-019 - Answer D: solitary
A gregarious person seeks others' company, while a solitary person tends to spend time apart from others.

20. HSPT-V11-020 - Answer D: essential
Something expendable can be sacrificed or dispensed with; something essential is necessary and cannot readily be given up.

21. HSPT-V11-021 - Answer C: flowing
Stagnant water remains still rather than moving, so flowing directly opposes the meaning established by the phrase.

22. HSPT-V11-022 - Answer A: forest
An oasis interrupts a dry desert landscape, just as a clearing interrupts the tree cover of a forest.

23. HSPT-V11-023 - Answer D: cloth
An inscription is worked onto a stone surface, while embroidery is worked onto a cloth surface.

24. HSPT-V11-024 - Answer B: sound
A duplicate reproduces an original, just as an echo reproduces a sound after it has been made.

25. HSPT-V11-025 - Answer C: repayment
A repayment returns money, matching the return involved in a refund, rebate, or reimbursement rather than a charge or request.

26. HSPT-V11-026 - Answer C: splice, merge, fuse
Splice, merge, and fuse all bring separate things together; each other group includes actions that separate things.

27. HSPT-V11-027 - Answer C: glass
Glass can form containers and melt into a liquid; paper, cotton, and wood ordinarily burn or decompose rather than melt.

28. HSPT-V11-028 - Answer A: Every object with a blue tag is labeled FRAGILE.
Requiring all blue-tagged objects to be labeled FRAGILE connects every clay model to the stated cushioning requirement.

29. HSPT-V11-029 - Answer B: Testing must occur before soldering.
Putting testing before soldering creates a cycle: soldering must precede sealing, sealing must precede testing, and testing must precede soldering.

30. HSPT-V11-030 - Answer D: his right
People facing one another have opposite left-right orientations, so Hana's left is on Ivo's right.

31. HSPT-V11-031 - Answer A: overjoyed
Jubilant describes great happiness or triumph, so overjoyed expresses the same strong positive feeling rather than a different mood.

32. HSPT-V11-032 - Answer B: detached
An aloof person remains detached or emotionally distant instead of becoming closely involved with other people.

33. HSPT-V11-033 - Answer C: guess
A conjecture is a guess or tentative explanation formed without enough evidence to establish that it is correct.

34. HSPT-V11-034 - Answer C: acquired
An innate quality is present from birth, whereas an acquired quality develops through experience or learning afterward.

35. HSPT-V11-035 - Answer B: arrogant
Humble describes a modest view of one's achievements, while arrogant describes an exaggerated sense of one's importance or superiority.

36. HSPT-V11-036 - Answer D: incriminate
To vindicate is to clear someone of blame; to incriminate is to connect that person with wrongdoing.

37. HSPT-V11-037 - Answer D: stock
A census records the members of a population, just as an inventory records the items held in stock.

38. HSPT-V11-038 - Answer A: remorse
A boast expresses pride, while an apology expresses remorse or regret about something the speaker has done.

39. HSPT-V11-039 - Answer A: lender
A tenant receives the use of property from a landlord, just as a borrower receives a loan from a lender.

40. HSPT-V11-040 - Answer A: almanac
An almanac is a kind of reference book, whereas a glossary, appendix, and index are sections within a book.

41. HSPT-V11-041 - Answer D: gauge
A gauge measures a condition such as pressure, while a valve, dam, or faucet controls the movement of liquid.

42. HSPT-V11-042 - Answer D: bank
Bank has both specified meanings; branch, reserve, and current do not name both an institution and the land beside a river.

43. HSPT-V11-043 - Answer C: Kea chooses magenta.
If Kea chooses magenta, Jem must choose cyan because yellow is excluded for Jem; that leaves yellow for Luz.

44. HSPT-V11-044 - Answer C: T points down.
R pointing up forces S to point up as well; because T must oppose S, T points down.

45. HSPT-V11-045 - Answer B: G, F, J, H
The route uses the open G–F, F–J, and J–H doorways; each alternative requires a blocked or nonexistent connection.

46. HSPT-V11-046 - Answer C: clear
Lucid describes something expressed clearly and understandably, rather than something confusing, unfriendly, or unnecessarily complicated.

47. HSPT-V11-047 - Answer C: skillful
Adroit describes skill or dexterity in handling a task, so skillful preserves the meaning better than the other choices.

48. HSPT-V11-048 - Answer A: fellowship
Camaraderie is the friendly trust and companionship shared within a group, which fellowship expresses rather than competition, separation, or compliance.

49. HSPT-V11-049 - Answer B: wavering
Tenacious describes holding firmly to a purpose; wavering describes uncertainty or loss of firmness in pursuing it.

50. HSPT-V11-050 - Answer C: extraordinary
Mundane describes the ordinary or unremarkable, whereas extraordinary describes something unusual enough to stand apart from everyday experience.

51. HSPT-V11-051 - Answer C: definite
An equivocal reply leaves its meaning or commitment uncertain; a definite reply makes the speaker's position clear.

52. HSPT-V11-052 - Answer A: successor
An ancestor comes earlier in a family line than a descendant; a predecessor similarly comes before a successor in a position.

53. HSPT-V11-053 - Answer B: endings
Alliteration repeats initial consonant sounds, while rhyme repeats ending sounds; each sound pattern is paired with its location.

54. HSPT-V11-054 - Answer D: condensation
An anagram results from rearranging letters, while a summary results from condensing the main content into a shorter form.

55. HSPT-V11-055 - Answer D: linen
Linen, satin, denim, and velvet are fabrics; the other choices name materials used for different purposes.

56. HSPT-V11-056 - Answer D: laminate
To laminate is to join layers, whereas crushing, grinding, and pulverizing break material into smaller pieces.

57. HSPT-V11-057 - Answer A: present; object
As nouns, PREsent and OBject stress the first syllable; as verbs, preSENT and obJECT stress the second.

58. HSPT-V11-058 - Answer B: At least one beacon is not transmitting.
The original claim fails if one or both beacons are not transmitting; it does not establish whether exactly one or neither is transmitting.

59. HSPT-V11-059 - Answer D: SILVER, BRONZE, BRONZE
Each replacement uses the original tag: GOLD changes only to SILVER, while the original SILVER and BRONZE tags both become BRONZE.

60. HSPT-V11-060 - Answer B: skating
The shared choices are rowing and skating; removing the fully booked rowing option leaves skating as the available shared choice.

Quantitative Skills

61. HSPT-Q11-001 - Answer B: 76
Each term after the first two equals the sum of the preceding two terms; 29 + 47 = 76.

62. HSPT-Q11-002 - Answer A: 71
The digits of 58 sum to 13, so the next term is 58 + 13 = 71.

63. HSPT-Q11-003 - Answer D: 3
The four-term cycle is 9, 3, 1, 7; position 30 has remainder 2 upon division by 4, so its term is 3.

64. HSPT-Q11-004 - Answer C: 24
Successive groups contain one 4, two 9s, three 14s, and four 19s; the next group begins with 24.

65. HSPT-Q11-005 - Answer A: 63
If the units digit is u, reversing changes the number by 54 − 9u; setting this equal to 27 gives u = 3.

66. HSPT-Q11-006 - Answer B: 2
Since 18 × 25 = 450, multiplying by 2 gives 900 = 30²; the other products are not perfect squares.

67. HSPT-Q11-007 - Answer A: 23
First, 1 □ 2 = 1 + 2 + 2 = 5; then 3 □ 5 = 3 + 5 + 15 = 23.

68. HSPT-Q11-008 - Answer B: Quantity B is greater.
The integers form n consecutive odd-even pairs, each containing one odd integer; Quantity A is n, less than n + 1.

69. HSPT-Q11-009 - Answer C: The two quantities are equal.
Adding two negative numbers combines their magnitudes, so the absolute value of their sum equals the sum of their absolute values.

70. HSPT-Q11-010 - Answer D: The relationship cannot be determined from the information given.
Both 35 and 44 round to 40 and differ by 9, while 39 and 40 also qualify but differ by only 1.

71. HSPT-Q11-011 - Answer C: The two quantities are equal.
The diagonal divides two original angles without changing their combined measure; both totals equal 360 degrees.

72. HSPT-Q11-012 - Answer D: The relationship cannot be determined from the information given.
Adjacent vertices are one side length apart, while opposite vertices are farther apart along a diagonal.

73. HSPT-Q11-013 - Answer B: Quantity B is greater.
The edge-length ratio is 2, but each face has four times the area, making the total surface-area ratio 4.

74. HSPT-Q11-014 - Answer C: 4
Fifteen has seven letters, seven has five, five has four, and four itself has four letters, so the sequence stays at 4.

75. HSPT-Q11-015 - Answer A: 2
The next integer is 16, whose prime factorization contains only 2; therefore its largest prime factor is 2.

76. HSPT-Q11-016 - Answer D: 8
At position 7 the quotient is 4, but at position 8 it is 3; all earlier quotients are larger.

77. HSPT-Q11-017 - Answer B: 3/11
If x = 0.272727..., then 100x − x = 27, so x = 27/99 = 3/11.

78. HSPT-Q11-018 - Answer A: 7/40
The reduced denominator 40 contains only factors 2 and 5, so the fraction terminates; the other reduced denominators contain 3.

79. HSPT-Q11-019 - Answer C: 30
Their product equals 6 × 90 = 540; dividing by the known integer gives 540 ÷ 18 = 30.

80. HSPT-Q11-020 - Answer B: 3
A zero product requires n − 5 = 0 or n + 2 = 0, giving 5 and −2, whose sum is 3.

81. HSPT-Q11-021 - Answer C: The two quantities are equal.
Quantity A equals xy/100, and Quantity B equals yx/100; multiplication order does not change the result.

82. HSPT-Q11-022 - Answer D: The relationship cannot be determined from the information given.
The list 1, 2, −1 has more positives, while −1, −2, −3 has more negatives; both products are negative.

83. HSPT-Q11-023 - Answer A: Quantity A is greater.
The increase is 15/30 = 50%, while the decrease is 15/45 = 33 1/3%; the different starting values change the percentages.

84. HSPT-Q11-024 - Answer B: Quantity B is greater.
The shared side disappears from the outside boundary, so the quadrilateral's perimeter excludes two copies of that positive side length.

85. HSPT-Q11-025 - Answer D: The relationship cannot be determined from the information given.
Triangles with sides 7, 7, 6 and 5, 9, 6 meet the conditions but have different heights; either could be P.

86. HSPT-Q11-026 - Answer C: The two quantities are equal.
The perpendicular diameters make four congruent quarter-circle regions, each with one-fourth of the total area and one-fourth of the circumference.

87. HSPT-Q11-027 - Answer C: 4
The first four blocks contain 1 + 2 + 3 + 4 = 10 terms; the next block begins 5, 4, making term 12 equal 4.

88. HSPT-Q11-028 - Answer A: 26
The preceding term, 52, is even, so the stated rule requires 52 ÷ 2 = 26 rather than the odd-number operation.

89. HSPT-Q11-029 - Answer D: 27
After 24, the next qualifying multiple is 27 from the multiples of 9; the next multiple of 4 is 28.

90. HSPT-Q11-030 - Answer B: 43
The increases are consecutive prime numbers: 2, 3, 5, 7, and 11; adding the next prime, 13, gives 43.

91. HSPT-Q11-031 - Answer C: 3
The factor 15 supplies one factor of 5 and 25 supplies two; the available factors of 2 form exactly three factors of 10.

92. HSPT-Q11-032 - Answer D: 18
A difference of 18 occurs with 91 − 73 or 37 − 19; the other possible tens-digit gaps produce larger differences.

93. HSPT-Q11-033 - Answer A: 9 less
The exact product is 609, while the substituted product is 600, so the estimate is 9 less.

94. HSPT-Q11-034 - Answer D: The relationship cannot be determined from the information given.
The set 0, 1, 2, 3, 14 has mean above its median, while −10, 1, 2, 3, 4 has mean below it.

95. HSPT-Q11-035 - Answer A: Quantity A is greater.
Subtracting Quantity B from Quantity A gives $2y(x - y)$, which is positive because $y > 0$ and $x > y$.

96. HSPT-Q11-036 - Answer C: The two quantities are equal.
Any common factor must divide the difference (n + 1) − n = 1, so the greatest common factor is 1.

97. HSPT-Q11-037 - Answer B: Quantity B is greater.
Within one triangle, the larger angle lies opposite the longer side; the side opposite 70° is longer than the side opposite 40°.

98. HSPT-Q11-038 - Answer D: The relationship cannot be determined from the information given.
P may be nearer to either side or equally far from both; its unspecified position does not fix the comparison.

99. HSPT-Q11-039 - Answer B: Quantity B is greater.
Removing the corner leaves portions of the three original sides plus the new cut edge, producing a four-sided polygon.

100. HSPT-Q11-040 - Answer B: 11
After the final addition, the greatest number remains 12 and the least becomes 1, so the recorded range is 12 − 1 = 11.

101. HSPT-Q11-041 - Answer C: 2/3
The numerators increase by 3 and the denominators by 4, giving 14/21; reducing both by 7 gives 2/3.

102. HSPT-Q11-042 - Answer A: 1353
Reversing the digits of 726 gives 627; the rule therefore gives 726 + 627 = 1353 for the next term.

103. HSPT-Q11-043 - Answer D: (18 − 6) ÷ 3 + 1
Subtracting first gives 12; dividing by 3 gives 4, and adding 1 gives 5. The other expressions give 17, 16.5, and 3.

104. HSPT-Q11-044 - Answer C: 15
The possible increasing triples are (2, 3, 10), (2, 5, 6), and (3, 4, 5); their sums are 15, 13, and 12.

105. HSPT-Q11-045 - Answer B: It increases but remains less than 1.
The denominator remains larger, so the fraction stays below 1; the unchanged gap becomes a smaller fraction of the larger denominator, increasing the value.

106. HSPT-Q11-046 - Answer A: 15
The sum is $5n/30 + 3n/30 = 4n/15$. Since 4 and 15 share no factor, n must be a multiple of 15.

107. HSPT-Q11-047 - Answer D: The relationship cannot be determined from the information given.
With three letters, the counts are 9 and 6; with four letters, they are 16 and 24. The ordering therefore changes with alphabet size.

108. HSPT-Q11-048 - Answer A: Quantity A is greater.
Every factor of n also divides n^2, and n^2 itself is an additional factor greater than n, so Quantity A is greater.

109. HSPT-Q11-049 - Answer C: The two quantities are equal.
Independence means the first four results do not affect the fifth toss; each specified toss has probability 1/2 of heads.

110. HSPT-Q11-050 - Answer B: Quantity B is greater.
The diameter is a square diagonal. That diagonal is shorter than two adjacent sides together, which equal half the perimeter.

111. HSPT-Q11-051 - Answer A: Quantity A is greater.
Each of the five edges of a pentagonal base corresponds to one rectangular side face, so Quantity A is 5.

112. HSPT-Q11-052 - Answer D: The relationship cannot be determined from the information given.
Equal corresponding angles establish similarity, but no scale or side length is specified; either triangle could have the greater perimeter.

Reading Comprehension

113. HSPT-R11-001 - Answer D: A child waves at the passing train.
The child waves from a crossing, prompting Noor, the man, and the woman to wave back together.

114. HSPT-R11-002 - Answer B: She is uncertain how to begin talking with strangers.
Preparing remarks and then finding them peculiar suggests that Noor feels unsure about initiating conversation with unfamiliar people.

115. HSPT-R11-003 - Answer A: practiced beforehand
Noor has mentally prepared possible remarks before breakfast, so rehearsed means practiced in advance rather than spoken spontaneously.

116. HSPT-R11-004 - Answer C: A third-person narrator reveals Noor's thoughts but reports the others through their words and actions.
The narrator describes Noor's private uncertainty, while information about the other passengers comes through observable actions and conversation.

117. HSPT-R11-005 - Answer B: It anticipates the passengers becoming connected while retaining their separate identities.
Separate reflections sharing one frame anticipate the conversation that brings distinct travelers into a brief shared experience.

118. HSPT-R11-006 - Answer C: Repeating a signal can protect its meaning, but the protection has limits and requires extra transmission.
The passage explains recovery from one changed flash, failure after two changes, and the extra signaling required.

119. HSPT-R11-007 - Answer A: OPEN
Two of the three flashes are brief, so the majority rule assigns the message OPEN to this received signal.

120. HSPT-R11-008 - Answer D: The receiver reads OPEN even though the sender transmitted CLOSED.
CLOSED begins as three long flashes; changing two produces two brief flashes, which the majority rule incorrectly reads as OPEN.

121. HSPT-R11-009 - Answer A: the extra signaling required beyond the original single flash
The passage defines the cost as three transmitted flashes instead of one, so overhead means the additional signaling required.

122. HSPT-R11-010 - Answer B: It presents a method, illustrates successful recovery and failure, and then considers the method's cost.
The paragraphs introduce repetition, demonstrate one-change recovery and two-change failure, and finish by weighing the extra transmission.

123. HSPT-R11-011 - Answer D: The painted rectangle and arc
The passage states that the paint has not changed; the title changes the viewer's starting point instead.

124. HSPT-R11-012 - Answer C: Return does not specify who returns or whether the return is welcome.
The discussion of Return explicitly identifies unanswered questions, showing how a title can guide thought without settling interpretation.

125. HSPT-R11-013 - Answer B: Titles can guide interpretation, but viewers should continue examining the artwork rather than accepting the title as a complete explanation.
The author values titles as useful guidance while warning that treating them as final answers can restrict attentive viewing.

126. HSPT-R11-014 - Answer C: It separates the title's influence on viewers from proof of what the artist originally planned.
A title chosen afterward may influence interpretation without establishing the artist's original plan; the passage does not prove what that plan was.

127. HSPT-R11-015 - Answer A: a suggested way of approaching the painting
The surrounding discussion concerns possible interpretations, so direction means a suggested approach rather than a location or binding instruction.

128. HSPT-R11-016 - Answer D: Thoughtful and measured
The author weighs both the usefulness and limitations of titles, using hypothetical examples and a balanced recommendation.

129. HSPT-R11-017 - Answer D: Pick up a stone that has begun to move
The narrator reaches for a flat stone rocking in the wash, before Soren gently catches the narrator's wrist.

130. HSPT-R11-018 - Answer B: An experience can be worth creating even when its physical result will not last.
Soren deliberately watches the tide erase his work, and the narrator gradually accepts the value of that temporary creation.

131. HSPT-R11-019 - Answer B: He expects the tide's changes to become part of the experience.
His calm acknowledgment, request to watch, and continued attention show that the tide's arrival is expected rather than an unwelcome surprise.

132. HSPT-R11-020 - Answer A: It gives the water an action associated with a person taking apart sewn work.
Unstitched personifies the water as an active dismantler, making the spiral's gradual separation easier to imagine.

133. HSPT-R11-021 - Answer C: It overturns the assumption that he needs to be warned and redirects attention toward why he welcomes the tide.
The reply changes the conflict from preventing an accidental loss to understanding a deliberate choice, which the following actions develop.

134. HSPT-R11-022 - Answer A: Sand or small stones collecting in the gap
The final paragraph identifies accumulated sand or stones as material that can restrict the joint's movement.

135. HSPT-R11-023 - Answer D: To explain why bridges include movable gaps and why those gaps need maintenance
The passage connects temperature-related movement to joint design, then explains the checks needed to keep joints functioning.

136. HSPT-R11-024 - Answer B: movement over a permitted distance
The paragraph discusses how much a bridge section may expand or contract, so travel refers to its permitted movement.

137. HSPT-R11-025 - Answer D: A physical cause leads to a design response, followed by factors affecting that response and its upkeep.
The passage moves from expansion and contraction to joints, then to required movement and maintenance conditions.

138. HSPT-R11-026 - Answer A: The longer section would generally need more room for temperature-related movement.
The passage explains that tiny changes accumulate over length, so matching material and temperature conditions leave length as a source of greater movement.

139. HSPT-R11-027 - Answer C: one
The opening paragraph explicitly awards one point for a win and no points for a loss under the example rules.

140. HSPT-R11-028 - Answer B: Cleo defeats Aster.
After Aster defeats Bram and Bram defeats Cleo, Cleo's victory over Aster closes the circle described in the passage.

141. HSPT-R11-029 - Answer C: An equal schedule can still produce equal totals, so final standings may require additional rules.
The equal schedule provides equal opportunities, but the three-player example shows why a separate method may be needed to resolve standings.

142. HSPT-R11-030 - Answer C: The tie would remain because those results still give each player one win.
Restricting attention to the three tied players changes nothing because each has already defeated one of the others and lost to the other.

143. HSPT-R11-031 - Answer D: the collection of game results
The sentence concerns converting collected contest results into standings, so record means the documented results rather than a special achievement.

144. HSPT-R11-032 - Answer A: It demonstrates a limit of equal scheduling that the later discussion of tie-breaking rules addresses.
The circular results reveal why a complete, equal schedule may not settle standings, creating the need for the rules discussed next.

145. HSPT-R11-033 - Answer D: noon
The opening sentence states the agreement precisely: two hours of help, from ten until noon, rather than the entire afternoon.

146. HSPT-R11-034 - Answer D: Stating a reasonable limit can resolve an expectation without damaging a relationship.
The narrator keeps the agreed commitment, explains the departure time, and receives a practical adjustment rather than the feared conflict.

147. HSPT-R11-035 - Answer B: The narrator has previously let unspoken expectations override personal plans.
Usually opening the carton and merely hoping someone notices the time suggests a habit of complying without clearly restating a limit.

148. HSPT-R11-036 - Answer A: squeezed into a narrow space
The narrator pushes the packed bag beneath the worktable, so wedged describes fitting it tightly into that space.

149. HSPT-R11-037 - Answer A: Its exaggeration reveals how much worse the narrator had imagined the consequences of leaving.
The exaggerated possibility of collapse humorously contrasts the narrator's feared disruption with the workshop's ordinary continuation.

150. HSPT-R11-038 - Answer C: A blue sock sticks out beneath the tablecloth.
On entering the room, Tavi sees the protruding blue sock before he begins the deliberately elaborate search.

151. HSPT-R11-039 - Answer D: Making a game enjoyable for another person can matter more than displaying one's own skill.
Tavi delays an obvious discovery and later leaves a clue himself, choosing a shared enjoyable game over proving his ability.

152. HSPT-R11-040 - Answer C: He wants Benji to have a satisfying chance to find him.
After deliberately extending Benji's hiding experience, Tavi chooses an easier hiding place and leaves a clue, supporting Benji's next turn.

153. HSPT-R11-041 - Answer A: serious
Tavi adopts an outwardly serious expression while performing his exaggerated search, making serious the meaning that fits the context.

154. HSPT-R11-042 - Answer B: The reader knows that Tavi saw the sock immediately, while Benji believes the search was difficult.
The reader shares Tavi's knowledge of the obvious clue, so Benji's mistaken belief creates affectionate dramatic irony.

155. HSPT-R11-043 - Answer B: The liquid's surface outside the straw
The first paragraph directly states that the surface of the liquid in the open cup is exposed to surrounding air.

156. HSPT-R11-044 - Answer D: To explain how pressure moves liquid through a straw and why height and leaks affect that process
The passage replaces a simple description of suction with a pressure explanation, then connects that explanation to height and leaks.

157. HSPT-R11-045 - Answer B: The taller column may require more support than that pressure difference can provide.
The taller column has more weight to support, so a pressure difference sufficient for the shorter column may be insufficient for it.

158. HSPT-R11-046 - Answer A: To introduce an everyday description that the following explanation makes more precise
The familiar wording supplies a starting point; the author then explains the pressure difference behind the experience it describes.

159. HSPT-R11-047 - Answer C: The author explains that the outcome depends on the competing rates of air entering and being removed.
The qualified wording matches the later explanation that a leak's effect depends on the balance between incoming and removed air.

160. HSPT-R11-048 - Answer D: The change in pacing shifts attention from routine duties to a private experience with emotional importance.
The compressed workday gives way to small, lingering household details, emphasizing the recording's personal importance to Maren.

161. HSPT-R11-049 - Answer B: A dog drags an oven mitt into view.
The dog enters with the oven mitt immediately after her father begins speaking, interrupting his carefully formal opening.

162. HSPT-R11-050 - Answer D: play repeatedly
Maren watches a second and third time, showing that loop means to replay the same recording repeatedly.

163. HSPT-R11-051 - Answer C: Distance can give familiar, ordinary details a new emotional importance.
Maren repeatedly watches household details she once overlooked, even turning away from the brilliant coastline to see the kitchen again.

164. HSPT-R11-052 - Answer B: He expects the familiar dog's antics to be something Maren will enjoy seeing.
His laughter and remark about missing the important news suggest he recognizes the ordinary interruption as an enjoyable message in itself.

165. HSPT-R11-053 - Answer C: To explain how illumination, surface reflection, and filtering together affect perceived color
The passage follows light through a source, reflecting surface, and possible filter to explain why an object's appearance can change.

166. HSPT-R11-054 - Answer D: blue
The second paragraph states that the white tile reflects the available blue light and therefore looks blue under that lamp.

167. HSPT-R11-055 - Answer A: allowing certain colors through while excluding others
The next sentence defines the filter's action: it transmits certain colors and blocks others, making the selection specific rather than random.

168. HSPT-R11-056 - Answer A: Very dark, because the filter blocks the red light reflected by the tile.
The tile reflects the lamp's red light, but the blue-only filter blocks that red light before it reaches the observer.

169. HSPT-R11-057 - Answer C: To qualify the idealized examples while preserving the general explanation
The author limits the examples' precision for real materials while retaining the principle that light must survive the entire path.

170. HSPT-R11-058 - Answer B: Finishing the building's roof
The workers have already finished the roof; the scissors publicly mark the opening rather than complete the construction work.

171. HSPT-R11-059 - Answer B: People who had heard different opening dates leave knowing that a building is now open.
The passage emphasizes a shared signal of transition; resolving different beliefs about an opening date gives the group that common understanding.

172. HSPT-R11-060 - Answer A: a point of transition into a new stage
The surrounding references to endings, beginnings, and a visible change show that threshold means a transition into another stage.

173. HSPT-R11-061 - Answer C: Ceremonies help people recognize the structure of changes whose substance comes from other activities.
Punctuation marks divisions without supplying the words; similarly, ceremonies mark transitions without doing all the work those transitions recognize.

174. HSPT-R11-062 - Answer D: Both illustrate completed work followed by public recognition of a transition.
Each example distinguishes prior substantive work from a later public act that helps people recognize a change together.

Mathematics

175. HSPT-M11-001 - Answer A: −0.8
The three equal intervals span 1.2, so each is 0.4; Q is two steps after −1.6, giving −0.8.

176. HSPT-M11-002 - Answer C: 2.652
The thousandths digit makes 2.652 round to 2.65, while its hundredths digit makes it round to 2.7.

177. HSPT-M11-003 - Answer D: 3/20
After 2/5 is used, 3/5 remains; the unreserved quarter of that remainder is (1/4) × (3/5) = 3/20.

178. HSPT-M11-004 - Answer B: $n^2 - 1$
Write $n = 2k + 1$; then $n^2 - 1 = 4k(k + 1)$, which is divisible by 4.

179. HSPT-M11-005 - Answer B: 40
The expression $6r + 2s$ equals $2(3r + s)$, so its value is $2 \times 20 = 40$.

180. HSPT-M11-006 - Answer D: x decreases by 3.
The change in y is −2 times the change in x; an increase of 6 requires x to change by −3.

181. HSPT-M11-007 - Answer A: 5, 6
The condition $24 \le 3 + 5n < 34$ gives $4.2 \le n < 6.2$, so the integer choices are 5 and 6.

182. HSPT-M11-008 - Answer C: 77
Adding the equations gives $2u = 22$, so $u = 11$ and $v = 7$; therefore $uv = 77$.

183. HSPT-M11-009 - Answer D: square
A slice parallel to a cube's bottom face has four equal sides and four right angles, forming a square.

184. HSPT-M11-010 - Answer C: 5
A vertex cannot connect diagonally to itself or its two neighbors, leaving 8 − 3 = 5 other vertices.

185. HSPT-M11-011 - Answer A: (5, −1)
The translation gives (1, 5); applying $(a, b) \to (b, -a)$ then gives (5, −1).

186. HSPT-M11-012 - Answer B: 2:55:30 p.m.
Six actual hours pass, producing a loss of 6 × 45 = 270 seconds, or 4 minutes 30 seconds.

187. HSPT-M11-013 - Answer C: 700 square centimeters
One square meter contains 100 × 100 = 10,000 square centimeters, so 0.07 × 10,000 = 700.

188. HSPT-M11-014 - Answer D: Customers who attend at other times were not included.
Friday evening attendees may have different scheduling preferences from other customers, whose views were excluded from the sample.

189. HSPT-M11-015 - Answer B: 3/5
Either brass then steel or steel then brass qualifies: (3/5 × 2/4) + (2/5 × 3/4) = 3/5.

190. HSPT-M11-016 - Answer A: 6
The two feature counts total 34, counting trails with both twice; subtracting the 28 distinct trails gives 6.

191. HSPT-M11-017 - Answer A: −3
Moving 5 units right from −2 gives 3; the opposite of 3 is −3, the same distance from zero.

192. HSPT-M11-018 - Answer B: 15
Write the original counts as 2k and 3k; $(2k + 6)/(3k) = 4/3$ gives $k = 3$, so the original total was $5k = 15$.

193. HSPT-M11-019 - Answer C: 42
The inputs represent 14 and 8 in ordinary notation; their sum is 22, which is 4 × 5 + 2, written 42 in base five.

194. HSPT-M11-020 - Answer B: 2x + 7 = 2x + 9
Subtracting 2x from both sides leaves the false statement 7 = 9, so no value of x satisfies this equation.

195. HSPT-M11-021 - Answer C: 3p(2q + 3)
Both terms share the factor 3p; factoring it out leaves 2q + 3 inside the parentheses.

196. HSPT-M11-022 - Answer B: 4 minutes
Together they drain 1/6 + 1/12 = 1/4 of the tank per minute, so draining one tank takes 4 minutes.

197. HSPT-M11-023 - Answer B: 7
The negative input gives −6 + 4 = −2; the nonnegative input gives $3^2 = 9$, and the outputs sum to 7.

198. HSPT-M11-024 - Answer D: 9 centimeters
The segment joining two side midpoints is half the third side, so MN = 18 ÷ 2 = 9 centimeters.

199. HSPT-M11-025 - Answer C: cone
A cone has one vertex at its tip; cylinders and spheres have no vertices, while a cube has eight.

200. HSPT-M11-026 - Answer D: 44 centimeters
The notch removes 3 centimeters of boundary but adds 3 + 2 + 2; the new perimeter is 40 − 3 + 7 = 44 centimeters.

201. HSPT-M11-027 - Answer A: 2 hours 30 minutes
The arrival time is 11:10 a.m. on Port A's clock; from 8:40 to 11:10 is 2 hours 30 minutes.

202. HSPT-M11-028 - Answer C: The 2-liter can costs $0.30 less per liter.
The unit prices are $9 ÷ 2 = $4.50 and $3.60 ÷ 0.75 = $4.80 per liter, a $0.30 difference.

203. HSPT-M11-029 - Answer D: grams per cubic centimeter
Dividing a mass in grams by a volume in cubic centimeters gives grams per cubic centimeter, with mass in the numerator.

204. HSPT-M11-030 - Answer A: 10.5 crates per shift
The crew handled 3 × 8 + 5 × 12 = 84 crates across 8 shifts; 84 ÷ 8 = 10.5.

205. HSPT-M11-031 - Answer A: 1/4
The information restricts the possible tickets to 9, 10, 11, and 12; only 11 is prime, giving probability 1/4.

206. HSPT-M11-032 - Answer D: 4
In order, the fifth reading is 3 and the sixth is 5; their average, (3 + 5) ÷ 2, is 4.

207. HSPT-M11-033 - Answer D: 8
Eight equals 2^3 and is not an integer square; 16 and 36 are squares, while 64 is both a square and a cube.

208. HSPT-M11-034 - Answer B: 2/3
The changed fraction is (4 × 3)/(9 × 2) = 12/18, which simplifies to 2/3.

209. HSPT-M11-035 - Answer A: odd integers
An odd integer times an odd integer is odd, while the sum of two odd integers is even and outside the set.

210. HSPT-M11-036 - Answer B: 0
A reciprocal must multiply the original number to give 1; zero times any number remains zero, so no reciprocal exists.

211. HSPT-M11-037 - Answer C: (x + y)/(x − y)
The entire sum must form the numerator, and the entire stated difference must form the denominator of the quotient.

212. HSPT-M11-038 - Answer B: a/(1 − a)
Multiplying gives ab + a = b; then a = b(1 − a), so b = a/(1 − a).

213. HSPT-M11-039 - Answer C: 3
The rate of change is (21 − 9)/(6 − 2) = 3; moving from input 2 to 0 lowers the output by 6, giving 3.

214. HSPT-M11-040 - Answer D: 2 hours 45 minutes
The extra $12 pays for four half-hour intervals after the first hour, requiring a duration greater than 2 hours 30 minutes and at most 3 hours.

215. HSPT-M11-041 - Answer A: 2
The lines through the midpoints of opposite sides are symmetry lines; the diagonals are not symmetry lines unless the rectangle is a square.

216. HSPT-M11-042 - Answer A: 7
Adding AB and AC and subtracting BC counts the A-tangent twice: 13 + 15 − 14 = 14, so its length is 7.

217. HSPT-M11-043 - Answer C: 6
Counting three edges on each of four faces gives 12 appearances; each edge is counted twice, so there are 6 distinct edges.

218. HSPT-M11-044 - Answer C: 17.5 cubic centimeters
The object displaces 89.5 − 72 = 17.5 milliliters, corresponding to a volume of 17.5 cubic centimeters.

219. HSPT-M11-045 - Answer A: 25 liters per second
Convert to 90,000 liters per hour, then divide by 3,600 seconds per hour to obtain 25 liters per second.

220. HSPT-M11-046 - Answer D: 1/4
The favorable interval lasts 27 − 12 = 15 seconds out of 60, so its probability is 15/60 = 1/4.

221. HSPT-M11-047 - Answer D: mode
The mode identifies the most frequent category, making it appropriate for fabric names that have no numerical order.

222. HSPT-M11-048 - Answer B: It is at least 4 and at most 8.
At most two observations can be below 4, and at most two can be above 8; therefore both combined middle observations lie between 4 and 8.

223. HSPT-M11-049 - Answer D: −3
On the number line, −3 is below −2.6, while the next integer, −2, is above it.

224. HSPT-M11-050 - Answer B: 10 percentage points; 25%
The share rises by 50 − 40 = 10 percentage points; relative to the original 40, the increase is 10/40 = 25%.

225. HSPT-M11-051 - Answer D: 20.0
Each original exceeds its rounded-down value by less than 1, so the original sum is less than 18 + 2 = 20.

226. HSPT-M11-052 - Answer D: 2r + 2c − 4
The top and bottom rows contribute 2c tiles; the two side columns contribute another 2(r − 2), excluding corners already counted.

227. HSPT-M11-053 - Answer B: −7
The coefficient is the number multiplying the variable; in −7x, that multiplier includes the negative sign and equals −7.

228. HSPT-M11-054 - Answer D: 2.4 meters per second
The two legs take 60 and 40 seconds. Average speed is total distance divided by total time: 240/100 = 2.4 meters per second.

229. HSPT-M11-055 - Answer C: 0 < x < 5
Multiplying both sides by the positive number 5x gives 5 > x; together with the given positivity, this means 0 < x < 5.

230. HSPT-M11-056 - Answer C: AM = MB
A perpendicular from the center to a chord bisects the chord, so M divides AB into equal segments AM and MB.

231. HSPT-M11-057 - Answer A: a reflection
A reflection preserves distances but reverses orientation; translations and rotations preserve orientation, while enlargement by 2 changes side lengths.

232. HSPT-M11-058 - Answer C: 4 centimeters
Conserving volume gives $\pi \times 2^2 \times 25 = \pi \times 5^2 \times h$; thus $100 = 25h$ and $h = 4$ centimeters.

233. HSPT-M11-059 - Answer A: Scale A is more precise, and Scale B is more accurate.
Scale A repeats exactly but stays 2 grams high; Scale B varies, yet every reading is closer to 100 and its mean is 100.

234. HSPT-M11-060 - Answer B: 270°
Clockwise from north passes east at 90° and south at 180° before reaching west at 270°.

235. HSPT-M11-061 - Answer C: 40
The dimensions fit 30/6 = 5 boxes, 20/5 = 4 boxes, and only 2 full layers of height 4; 5 × 4 × 2 = 40.

236. HSPT-M11-062 - Answer A: 1/2
The chance of no star is (2/3)(3/4) = 1/2; subtracting from 1 gives a qualifying probability of 1/2.

237. HSPT-M11-063 - Answer A: 1/5
There are 10 unordered pairs. Only {3, 5} and {4, 5} have sums at least 8, giving 2/10 = 1/5.

238. HSPT-M11-064 - Answer B: 5
Exclude the overall median, 11. The lower half is 3, 5, 8, whose middle value is 5.

Language

239. HSPT-L11-001 - Answer D: The note was in someone else's handwriting.
The possessive of someone else is someone else's, with the apostrophe and s attached to else.

240. HSPT-L11-002 - Answer C: The route ends in Salem, Oregon; Boise, Idaho; and Reno, Nevada.
Semicolons separate the complete city-and-state entries, while commas remain within each entry between the city and state.

241. HSPT-L11-003 - Answer A: Have you read "Night Ferry"?
The sentence asks the question, not the story title, so the question mark goes outside the title's closing quotation mark.

242. HSPT-L11-004 - Answer B: Our model shows Mars and its two moons.
Mars is a planet's proper name and takes a capital letter, while model, two, and moons are common words.

243. HSPT-L11-005 - Answer A: The actor delivered a Shakespearean speech in a modern costume.
Shakespearean is an adjective derived from the proper name Shakespeare, so it is capitalized; speech and modern costume remain lowercase.

244. HSPT-L11-006 - Answer C: buoyancy
Buoyancy is the standard spelling, preserving buoy at the beginning and ending with ancy rather than ency.

245. HSPT-L11-007 - Answer D: rhythm
Rhythm is spelled r-h-y-t-h-m, with no added vowel between the final consonants in its singular form.

246. HSPT-L11-008 - Answer C: be
After requested that, the subjunctive uses the base form be to express an action being required.

247. HSPT-L11-009 - Answer A: dug
The passive verb phrase has been requires the past participle; the irregular past participle of dig is dug.

248. HSPT-L11-010 - Answer D: This crane's reach is longer than that of any other crane in the yard.
That substitutes for reach, keeping like things in the comparison, and other excludes the crane from comparison with itself.

249. HSPT-L11-011 - Answer B: stationary
Stationary means not moving; stationery refers to writing supplies, and the other forms do not fit the stated meaning.

250. HSPT-L11-012 - Answer A: No one except the night operator may restart the press.
Only limits the person permitted to act; no one except preserves that restriction without changing the permitted action or time.

251. HSPT-L11-013 - Answer C: In repeated trials, the combined arrangement used fewer grams of packaging than full trays and prevented the knobs from touching.
This finding directly supports both parts of sentence 6: reduced material use and separation of the knobs.

252. HSPT-L11-014 - Answer D: Before sentence 5
Sentences 1–4 introduce the problem and compare the original options; sentence 5 shifts to the combined design.

253. HSPT-L11-015 - Answer B: For these ceramic knobs, the divider-and-cushion arrangement offers a useful balance of protection and material use.
The evidence concerns these knobs and this arrangement, so the conclusion should avoid unsupported claims about all products or companies.

254. HSPT-L11-016 - Answer D: The workers lifted the heavy, awkward crate.
Heavy and awkward independently describe the crate, so a comma separates these coordinate adjectives without separating them from the noun.

255. HSPT-L11-017 - Answer D: Marin and Keon's workshop occupies one room.
For joint ownership, only the final name takes the possessive ending: Marin and Keon's workshop.

256. HSPT-L11-018 - Answer A: We spoke with Helen Tran, the director of operations.
A job title used descriptively after a name remains lowercase; the person's proper name retains its capitals.

257. HSPT-L11-019 - Answer C: The hikers carried a GPS receiver.
The established initialism GPS uses all three capital letters, while the common noun receiver stays lowercase.

258. HSPT-L11-020 - Answer B: sincerely
Sincerely is formed from sincere plus ly, retaining the final e before the added ending.

259. HSPT-L11-021 - Answer C: mischievous
Mischievous is spelled with ie after the ch and without an additional i between the v and ous.

260. HSPT-L11-022 - Answer D: perseverance
Perseverance contains persever followed by ance, without an added r after the first se or an ence ending.

261. HSPT-L11-023 - Answer D: worst
The sentence compares one route with all the others, requiring the irregular superlative worst rather than the comparative worse.

262. HSPT-L11-024 - Answer A: has been practicing
The present perfect progressive has been practicing connects an activity begun in the past with its continuation into the present.

263. HSPT-L11-025 - Answer C: I
The comparison leaves out the words trust Elena after I, so the subject pronoun I preserves the intended meaning.

264. HSPT-L11-026 - Answer B: complements; compliment
Complements means balances or completes the sauce; compliment is the noun meaning a favorable remark made by the guest.

265. HSPT-L11-027 - Answer B: At least one compartment is not sealed.
Not every denies universal coverage: at least one compartment is unsealed, without specifying whether any other compartment is sealed.

266. HSPT-L11-028 - Answer A: 2, 4, 3
The slit must be cut before its edges can overlap, and the edges must overlap before they can be taped together.

267. HSPT-L11-029 - Answer B: To check that the opening works,
The test checks whether grains pass through the opening, so the added phrase states the purpose of that action directly.

268. HSPT-L11-030 - Answer A: because grains may bunch together and block an opening that is too small.
The replacement explains clog through the concrete action of grains bunching together and blocking the opening, while preserving the warning.

269. HSPT-L11-031 - Answer D: We followed a five-mile route.
A number and a singular unit form a hyphenated compound modifier before a noun: five-mile route.

270. HSPT-L11-032 - Answer C: Please bring the blue folder, Rosa.
A comma separates the name of the person addressed, Rosa, from the rest of the request.

271. HSPT-L11-033 - Answer A: The detour added two miles (about thirty minutes).
The parenthetical words are a phrase within the larger sentence, so the sentence's period belongs after the closing parenthesis.

272. HSPT-L11-034 - Answer D: The ranger said, "Follow the orange markers."
A complete sentence quoted directly begins with a capital letter; orange and markers remain ordinary lowercase words.

273. HSPT-L11-035 - Answer B: Across the courtyard, I heard a door close.
The first-person singular pronoun I is always capitalized, even when it appears in the middle of a sentence.

274. HSPT-L11-036 - Answer C: calendar
Calendar ends in ar, not er, and uses one l; this is the standard spelling of the word.

275. HSPT-L11-037 - Answer C: guarantee
Guarantee begins with guar and ends with antee, including both final e's in its standard spelling.

276. HSPT-L11-038 - Answer B: are; is
With half of, agreement follows the noun: plural cables takes are, while the mass noun wire takes is.

277. HSPT-L11-039 - Answer B: Do you know where the spare spool is?
Inside an indirect question, the subject precedes its verb: the spare spool is, rather than the direct-question order is the spare spool.

278. HSPT-L11-040 - Answer A: smooth
Felt is a linking verb here, so the adjective smooth describes the handle rather than modifying an action.

279. HSPT-L11-041 - Answer A: principle
Principle means a guiding rule or idea, which fits the statement about how the design is organized.

280. HSPT-L11-042 - Answer B: emigrate; immigrate
Emigrate describes leaving a country, while immigrate describes entering another country to live there; from and to establish the perspectives.

281. HSPT-L11-043 - Answer D: No more than six devices can be connected at once.
Up to sets a maximum of six, without requiring that the maximum number actually be connected.

282. HSPT-L11-044 - Answer A: A concise description can often fit on one line beneath each dish name.
A one-line description directly addresses the concern about crowding while preserving the proposed benefit of explaining unfamiliar dishes.

283. HSPT-L11-045 - Answer C: Pierogi: boiled dumplings filled with potato and onion.
The entry retains the established name and supplies concise, concrete preparation and ingredient details instead of replacing the name or offering empty praise.

284. HSPT-L11-046 - Answer A: Technology changed rapidly during the 1990s.
A plural decade formed from a complete year takes a plain s; no apostrophe is needed to show the plural.

285. HSPT-L11-047 - Answer C: The archive opened on April 9, 2025, in the renovated mill.
In a month-day-year date, a comma separates the day from the year, and another follows the year when the sentence continues.

286. HSPT-L11-048 - Answer C: The World Meteorological Organization is an international organization.
The words in the organization's proper name are capitalized, but international organization is a general description and remains lowercase.

287. HSPT-L11-049 - Answer D: The certificate lists Miles Carter Jr. as the recipient.
The conventional abbreviation for Junior in a personal name is Jr., with a capital J and lowercase r.

288. HSPT-L11-050 - Answer B: convenience
Convenience has the sequence venience after con; the other choices change a vowel, reverse letters, or omit the second n.

289. HSPT-L11-051 - Answer D: noticeable
Noticeable retains the final e of notice before able; the other choices omit a required letter or add an extra c.

290. HSPT-L11-052 - Answer A: conscience
Conscience uses sc after con and ends with ence; the alternatives omit a required letter or substitute s for c.

291. HSPT-L11-053 - Answer B: review
A modal verb such as must is followed by the base form of the main verb, so review is required.

292. HSPT-L11-054 - Answer D: moving
After the preposition without, a verb takes its ing form to function as the object: without moving the camera.

293. HSPT-L11-055 - Answer A: whoever
Whoever is the subject of finishes within its clause; the entire clause, rather than that pronoun alone, is the object of to.

294. HSPT-L11-056 - Answer C: all ready; already
All ready means fully prepared, describing the crew; already means before that time, describing when the checking had occurred.

295. HSPT-L11-057 - Answer B: appraise; apprise
Appraise means assess value, fitting the desk; apprise means inform, fitting the owner who will receive the result.

296. HSPT-L11-058 - Answer D: The inspection found no defects.
Found no defects states the absence directly; the other versions combine negative expressions in ways that do not meet standard formal usage.

297. HSPT-L11-059 - Answer C: Back in the elevator,
Back in the elevator returns readers to the ride interrupted by the memory, clarifying which time and setting sentence 5 resumes.

298. HSPT-L11-060 - Answer A: From the glass wall, I could trace the whole curve of the harbor.
I could keeps the narrator's first-person viewpoint and past time; the alternatives shift the person, the time frame, or both.
